Ponde. 1606.

A preſident for Prognoſticators.

A new Almanacke for this preſent yeare of our Lord God.

M DC VI.

Being the ſecond after the Leape yeare.

Calculated for the Latitude and Meridian of the Auncient ſhire towne of *Eſſex* called Chelmel-ford:

And generally for al Greate *Britaine*, amplyfied with new additions,

By *Edward Pond* profeſſor of the Mathematickes.

Imprinted at London for the *Company of the Stationers.*

Goe forth my Booke declare my minde to friend and eke to foe
Thou need'st not feare, to shew thy face, where soeuer thou dooſt goe:
Though some delight with readier tongues, foorthwith to reprehend thee
Then fraught with skill to frame the like, or any way to mend thee.
But well thou know'ſt thy Authors minde, to enuie dooth not tend:
But what's amiſſe, with diligence, he seeketh to amend. Farewell.

The Contentes, vſe and proofe of this Almanacke. 1606.

1. Briefe computation or Cronologie of time. *Deut. 4. 32.*
2. The dates of moueable feaſts, vulgar and forraine.
3. The moueable feaſts in the next yere. 1607. *Le. 23.*
4. A perpetuall rule for all other feaſts.

9. A Kalender of the *Hebrewes, Grecians & Egyptians*, yeares and monthes, compared with our *Iulian* and *Gregorian* yeare.
10. The dates of Natiuitie, and death, and the yeres ſince, of diuers men worthy memorie. *Prou. 10. 7*
11. The dates of many worthy actes done, remembred in Eccleſiaſticall Hiſtories. *Iob 8. 8. 9.*
12. The beginning and ending of the 4. Termes of Law, with their 21. returnes (in the Kalender) *2. Cor 12. 5. 6. 7.*
13. The time when the Sunne entreth into euerie of the xii. Signes, whereby is deſcribed the Month *Solar. Pſal. 111.*
14. The time of the birth, of the Baptiſme, death, reſurrection, and aſſention of Chriſt.
15. The raigne of the Kinges of England. &c. whereby may bee knowne, the time ſince the date of any auncient writing, by deducting the yeare of the King in the which it was dated, from the number of yeares (found in the Kalender) ſince he began his raigne, and the remainder sheweth your deſire.

16. The

BM 30.5.72

16. The number of Sundaies after Easter, and Trinitie.
17. The signe and degree wherin the Moone mooueth euery day at noone, (each signe hath 30. degrees.) *Psal.* 104. 19
18. The houre and minute of the Sun setting for euery day in the yeare. *Psal.* 104. 19. 24. *Iob.* 36. 24. 25. 26. *Psal* 136 which houres and minutes of the Sunne setting, is halfe the length of the same day from Sunne rising: as the 8. of Januarie, he setteth at 4. and 8. minu. therefore the length of the same day is 8. houres 16. min. To know the time of Sun rising, looke how many houres and minutes he setteth after 3. 4. 5. 6. 7. 8. so many houres and minutes he riseth before 9. 8. 7. 6. 5. 4. as the same 8. day he setteth 8. minut. after 4. he riseth 8. min. before 8. that is at 7. and 52. min. which likewise is halfe the length of the same night. *Psal.* 10. 1. 2.
19. The Aspects of the Moone with the fixed Starres.
20. The time of the change, ful, and quarters of the Moone.
21. A Table for the easie finding of the Raignes of the Kings of England, since the conquest.
22. A memoriall of the Tearmes of Law.
23. A Table shewing the Returne or Elloyne day, & daies of appearande of Juries in the Common Pleas, published by me at the requests and directions of the Judges, for the auoiding the losse of Issues, by Juries, through mistaking their day of appearance, &c. *Deut.* 25. 1. 2.
24. A Table of the Lawdaies of ỹ Courts of the Arches, the Admirall Court: the Court of the Audience of Canterbury: the Prerogatiue Court, the Consistorie Court: the Court of Deligates, and of his Higuelle Commissions vpon Appeales, &c. *Deut.* 19. 15. 16. 17. 18.
25. Of numeration, for such as haue not that knowledge.
26. Of the time of the Tides. *Psal.* 107. 23. 24. 25. 29.
27. To know the houre of the night by the Moon. *Gen.* 1. 16
28. Anagnorance in Mariners reformed.
29. Of the vnequall rising and setting of the Moone.

30. The ſpirituall vſe of the Starre. Ez. 10.
31. Of the Eclipſes this preſent yeare. Iob. 36.24.25.26.
32. A common opinion (yet erronious) concerning the Eclipſes, explaned and laide open.
33. Familliar compariſons, Godly ſimilitudes and the ſpirituall and right vſe thereof.
34. An anſwere, to an obiection (that may ſeeme) to confute my former ſaying, as touching Eclipſes, & falling Starrs.
35. Aſtronomicall elections for Phiſicke. Gen. 1.14.
36. Briefe rules of husbandrie. Gen. 1.14.
37. An admonition vnto Phiſicians and Surgions.
38. An auncient and common errour laide open, concerning the naturall operation of the Moone, and how it now differeth from that it hath bin in times paſt. The miſtaking whereof hath deceiued many in their Elections, and Iudicialles both Aſtronomicall and meditinall.
39. A Caueat for thoſe that ſhall receiue Phyſicke.
40. The nature of the 12. ſignes, concerning the bodie of man, and diſeaſes.
41. The Characters of the Signes, and Planets,
42. Of the foure quarters compared with 4 Hebrue months.
43. The deuiſion of our vulgar yeare into 4 parts.
44. The diſeaſes, Incident to each Quarter.
45. Of the naturall inclination of the ayre. Iob. 38.31,32,
46. The reaſon why the iudgements of the beſt learned doe often faile. Pro. 31.30. Iſa. 55.8.9. Ame. 4.7. Rom. 11. 33.34.
47. The ſpirituall vſe of Aſtrologie. Luke. 11. 54.55.56. 57. Math. 16.

The ſecret thinges belong to the Lord our God, but the thinges reuealed belong vnto vs and to our children for euer, that we may doe all the words of this lawe. Deut 29.29.

A briefe

A briefe Computatiō of time complete within this present yeare, 1606.

From the Creation of the world vnto this present yeare are contained.	5568
From the Creation vntill the generall Flowd.	1657
From the Creation of the world vntill Christ	3963
From *Noahs* Flowd vntill this present yeare.	3912
Since the birth of *Abraham*.	3620
Since the Israelites departed out of Egipt.	3115
Since the destruction of the Cittie of Troy.	2789
Since *Brute* entred this Iland.	2713
Since the building of the Temple of *Salomon*.	2635
Since the building of the Cittie of *Rome*.	2357
Since *Nabuchadnezzer* the King.	2353
Since the Captiuitie of *Babilon*.	2244
Since the desolation of the Temple.	2213
Since *Alexander* the great dyed.	1930
Since *Iulius Cæsar* slaine with Bodkins.	1655

A perfect and easie Table, for the ready finding of the beginning of the Raignes of euerie of the Kinges of England, noted in the Kallender.

The vse wherof is thus, first in this Table finde y name of the King, which you desire to know as they are heer placed in order, with the yeare of our Lord, and the month wherein he began his Raigne, then turne to the same month in the Kalender, & you shall finde his name on the same day, vpon the w hee began his raigne, with the number of yeres, complet (written in the next line) since the same time. And the number of years, monthes, and daies, that the same King Raigned (as for example) King Edward the third began his Raigne in the yeare of our Lord, 1327. in the month of Januarie. Now turning to Januarie, I finde K. Edward the 3. on the 25. day, vpon which day he began to raigne 279 yeares since, and he Raigned 50. yeares, 5 monthes and 7. daies.

The Table.

A Prognostication, seruing for the yeere of our Lord God, and Sauiour Iesus Christ. 1606.

A Briefe admonition, vnto such Physitians and Chirurgions, as haue not the knowledge of Astronomie.

FRiendly Reader, the cause that moueth me to write this admonition, was not onely at the earnest desire of my friends, but also perceiuing the great necessitie, that is required in the art of physicke and Surgerie, to know the true mouing of the sunne and moone through the xij. Signes: for when the moone is in some signes, she is infortunate, and it is not good to let blood, make incisions, purge, or vse other operations appertayning to the art of medicine, in minishing whereof dangers may happen.

And forasmuch as the Arte of Physick and Surgerie, requireth a speciall knowledge in Astronomie, to iudge and discerne the dangerous times from the good, and that the said Practisers which exercise and vse the same Arte, are many of the vnlearned, (which is much to be lamented) by meanes whereof they are not able to iudge: Neyther do they followe Hipocrates counsell, to helpe the sicke without danger.

Therefore for the better vnderstanding, I haue set forth the true mouing of the moone, how she passeth through euery signe: not onely according to the common account (which in deed was true in the time of Ptolomeus & other ancient writers) but also her true motion and aspects: now in these latter times, (placed in the last edition of space in the Kalender in euery moneth)

C. which

which differeth one whole signe wanting but two degrees from the vulgar account, which reformed account (by all naturall causes) must of necessitie be a receiued truth, both of Astrologians, Phisition, Surgions and Husbandmen: but for the rules of Nauigation, for the aspects with the sunne, as the change, full, & quarters, and such like, the ancient order may be obserued: wherein I would not haue you to mistake my meaning: for I speake heere of such naturall causes as those are, ouer which the moone hath any gouernment in nature, as in diseases, mutation of the ayre, heate, dryenesse, cold, moisture, or such like: which vertue or power she receiueth wholy from the starres, or constellations of starres, with the which she is either coniunct, or distunct, or els receiueth beholden with a quartill or opposite aspect. As in the 12 signes, the first constellation of starres, Aries or the Ram, (so called for the distinction and propertie) is hote and dry, cholerick, &c. gouerning the heade and face, and the mutuities of them, as leaprose, swthach, baldnes, feuers of blood &c. which constellation of starres (as is well knowne, and apparantly seene of Astronomers) by reason of a secrete or slowe motion which the whole orbe of fixed starres hath, sliding frō the equinoctiall poynt, about one degree in 67 yeeres: they are nowe remoued into the signes of Taurus, and Taurus in Gemini, & Gemini in Cancer, and so consequently all the other of the 12. constellations of starres, are remoued into other signes, causing those signes, by the quality of those starres that are now in them, to be of an other nature: as Aries which was hote and dry as now (by reason that the starres of Pisces are moued thether) cold and moyst, and Taurus which was cold and dry, is nowe of the nature of the starres of Aries, that is hote and dry: and so of all the residue of the fixed starres, they are remoued into new houses, or mansions.

Then (I say) if these be not considered, let any meane capacitie iudge how grosse an errour we may easily run into: for the moone receiueth her nature (and giueth it

vnto

vnto all elementall bodies) from the nature and qualitie of those starres wherwith she is ioyned, which starres (nett vnder God) are the cause of alteration & perturbation in all elementall creatures. The effects wherof (the moone being an ayde thereto) we do both feele and see. But if the cause be taken away, or removed as the starres are into other mansions, the what effect may wee looke for, that the moone can bring from thence vnto vs. Can a man fetch wine out of a fishpoole? No more can the moone bring heate & vines out from the starres of Pisces, which now are in the house of Aries, because they are of a contrary nature, that is to say, colde and moyst.

Many other similies could I bring to prove this which here I have written, were it not so manifest of it selfe, both to the eye, and to reason of every one that hath any capacitie at all, that he might be accounted hery obstinate or senceliesse that would seeme to deny it.

Yet I doe not doubt but that this shall be profitable vnto you; for it is truly set forth according to ye rules of Astronomie, desiring you to accept my good will heereby: further advertising you that professe the Arte of medicine or surgery, both for Gods cause, for the safe gard of the Kings people, and also for the worthy fame of the Art, that you doe not boldly, and vnadvisedlie, without counsell of some learned men in the same Art, or some grave and learned Phisitions which hath had long experience, take vpon you to let bloud, purge or vse other actions, as I say in place, which might, (being misused) be not onely great hinderance and discredite vnto your selues, but also a great perrill and danger vnto the sicke and grieved Patient, and the great slaunder of those worthy and necessary Arts, and spetially to the displeasure of GOD. Therefore let every man take heed what Phisition he taketh, for they be not all Doctors that weare long knives.

Of the foure Quarters of this yeere. 1606.

VVith their Months, according to the account of the Hebrewes, Grecians, Egiptians, and Latines. And first of Winter.

The Hebrew quarter and monthes.	Græcian monthes.	Egyptian monthes.	Vulgar month. Quar.
Coreph { Schebath, 11 / Adar. 12 / Veadar. 13.	Posideon. 7. / Gamelion. 8. / Elapheboli 9	Mechir. 6. / Phamenoth. 7 / Pharamthi. 8.	Decēb. / Ianua. / Febru. } Hyemal

The Winter quarter began (with vs) the 11 day of December, 1605. the sunne then entring into the Hyemall solsticiall signe Capricorne, as then farthest distant from our Zenith, and thereby the shortest day and longest night, his meridian altitude but 19. degrees. This quarter containeth 89 dayes: Of nature cold and moist, of the phlegmatick complexion like to old age. The sicknesses and diseases incident to this quarter are stitches, inflamation of the lungs, ach in the brest, the goyne, head-ach and palsies.

Concerning my iudgement of the disposition of the ayre, and plenty of fruites of the earth, when I shall see that you have learned to make a godly e right vse thereof, then shall I be more willing to suspend my iudgement: and in the meane time, obserue my iudgements of the Eclipses in my last yeeres Almanack, which continue yet for two yeeres to come. &c.

Of the Spring.

Zoreph.	Abib, 1. Munichion. 10. Pathen. 9. March. 3. / Iiar, 2. Thargelion, 11. Payni, 10. Aprill, 4. / Siuã, 3. Scirophon, 12. Epephi, 11. May, 5.	Vernall.

The Spring time beginneth the 17. day of March 1606. the sunne then entring into Aries, making equall day

day and night. This quarter continueth vntill the 12 day of June, containing 94 dayes: of nature hote and moyst, of the sanguine coplexion, likened to flourishing youth: (the Pleiades watering ye earth with their sweet influentall dewes) Iob. 38, 31. A very meet time to take phisick, and to purge the body &c. The diseases incident to this quarter, are melancholy, falling euils, squinancie, cough, pose, hoarsenesse, leprie, & ach in the ioynts.

Of the Summer Solstice.

Kesir.	Thazan.	4.	Hecatombæon.	1.	Mesori.	12.	Iune. 6.
	Ab.	5.	Metagiton.	2.	Thoth.	1.	July. 7.

Estiuall

Summer begynneth the xij. day of June, the sunne entring into ye Æstiuall solsticiall poyne of Cancer, making our longest day & shortest night, his meridian altitude 62. degrees. This quarter continueth vntill the 13 of September, containing 92 dayes, of nature hote and dry likened to middle age: subiect to many hote and dangerous sicknesses, as hote feauers, vomits, running eyes, payne in the eares, blisters, sore mouthes, and immoderate sweat.

Of the Harueſt, or Autome.

Kesir.	Thybi.	7.	Mamacterion.	Anthir.	3.	Sept. 9.	Au-
	Marchesuan.	8.	Pyanepsion.		5.	Octo. 10.	tum.
	Casleu.	9.	Poseideon.	Tybi.	6.	Nou. 11.	

Harueſt, or fall of the leafe, beginneth the xij. day of September, the sunne entring into Libra, making equall day & night. This quarter continueth 90 dayes, of nature cold and dry, likened to old age. Diseases incident are Opilations of the splene, dropsie, consumption, rostiquenesse, ach in the knees, sower breath, fretting in the bowells, and melancholie.

The Conclusion.

¶ It is a vaine, yet a common receiued custome amongst many men, to prejudge, or foretell of warres & peace, of Kings and Princes affayres, and such like: to the which I say with Esay, 44, 24, 25. Thus sayth the Lord, I the Lord doe all things my selfe alone, I onely spread out the heauens, &c. I destroy y tokens of witches, and make the Soothsayers fooles. I turne the wise, I turne them backe, and make their wisedome foolishnesse. &c. Of those foolish Prophets, of whom too many liue in these our dayes, I would wish you to reade with a single eye, (without rash iudgement) the saying of the Lorde by the mouth of his Prophet Ezechiell, chap. 13. And as for Kings and Princes, let vs pray vnto the Lord with the Prophet Dauid, Psalm, 72. Giue the King thy iudgements (O God) & thy righteousnesse vnto the Kings sonne: then shall hee iudge the people according vnto right: and defend the poore, &c. In his time shall the righteous flourish, yea and abundance of peace: his Name shall endure for euer, and his posteritie shall be blessed thorough him, &c. Blessed be the Lord God, euen the God of Israell, which onelie doth wonderous things. Amen.

There shal be no Eclipse of any of the Lights this yeere. 1606.

AS concerning the Eclipses of the sunne or moone, many doe hold an opinion, that when as eyther of them are darkned, that then they are in great trouble, and much vexed with labour. Therfore to auoyd this grosse error, I would haue you to vnderstand, that the sunne is light of himselfe, the moone borroweth her light from the sunne. Therefore, whensoeuer the body of the earth shall be interposed, betweene the light of the sunne and the body of the moone, (which commeth but at the

full moone, as we terme it) then must the moone of ne-
cessitie loose her borowed light, but not be troubled with-
in mind, or labouring in body, as though the moone hath
a reasonable soule, or a feeling body as man hath, &c. no
more then if the sunne (when her shinerly night cleere)
betweene the sunne and a round glasse a man should put
a thicke ball, to shadow the sunne from the perspecting
glasse: there he may behold an eclipse or darkning of the
light upon the glasse, yet were it not a fond thing for a
man to say that the glasse, (which representeth the body
of the moone) did thereby suffer or feele any danger.

But whensoeuer we shal behold any such Eclipse, to
make a profitable vse thereof, first let vs consider the
mighty power of the Creator, Rom. 1. Secondly, there
we may behold and see, that although that wicked Anti-
christ the world, doth neuer so ofte thrust himselfe for-
ward, betweene the light of the Gospell of Christ, which
representeth the sun, Luke 2. 32. and the Church, which
hath no true light but what from thence shee receiueth,
figured the moone, yet that darknesse cannot continue
long, but the Lord, the sunne of light, which shineth in
darknes, and the darknesse comprehendeth it not. will
shortly send his spirituall beames of light, unto the co-
fort of his Church, & all the members thereof. 1. John.
1. 4. 5.

Furthermore, concerning the Eclipse of the sunne, it
is darkned but in respect of our sight, by the interpositi-
on of the body of the moone betweene vs & the sunne, and
hath in himselfe no more losse of his naturall light, then
if that the false Church, being corrupted and darkned
with the error of blindnes, (as the Antichristian Church
of Rome is) should interpose herselfe betweene vs and
Christ: yet for the short continuance of time of that ob-
scuritie, shee shall no more be able to burt either Christ
the sunne, or be that are the faithfull, then if a man
holding a burning torch a farre off, a mighty deepe ri-
uer in the middle betweene him & the light, should be able
to extinguish the light, or to hurt or blind my eyes that

(gaze

seeing any more. Psalm. 91. 1. 92. 9.

Againe, some haue presumed to prophecie of certaine starres, which should fall, either vpon the land, & then they threaten the destruction of men, beasts, and fruits, or els vpon the water, & then the fishes should die, &c. Oh, is it not a haine thing, to expect a starre to fall into the sea, whereas (out of all doubt) the least starre which we can behold, is farre greater then the whole world, both land and sea.

But let me stay there, me thinks I heare a troupe of people saying vnto me, What, hath not the Lord sayd, Matth. 24. The sunne shall be darkned, the moone shall not giue her light, but shall be turned into blood, & the starres shall fall from heauen, &c. Oh welbeloued, it is manifest, and some of vs shall finde it to too true, at the dreadfull day of Iudgement, (which is now at hand, it cannot be farre off,) that the son of God the true light, hath been darkned, or hidden from vs, with the vile, filthy, fome, and fogrie clowdes of iniquitie: from vs (O wicked caitifes) so long tuning in the ayre, wherebye the moone, the Church, hath not giuen her light so quick, as she should haue done, or shall do in the time of her perfection, but hath been turned into blood. Oh most lamentable it is to speake, much more to remember, how many thousands of Martyrs, haue lost theyr liues for the Gospell sake, by Antichristian and cruell Tyrants. Againe on the otherside, what a great number of the starres, or Ministers of the Church, haue fallen from heauen, insomuch as the very powers of heauen and earth haue been shaken thereat: yea euen then, when as those of the people, (who should haue been as the starres of heauen, to giue light in the night season) did so villainously crucifie that immaculate lamb Christ Iesus. And how we now liuing in the world, doe still daily crucifie him. What adamantine hart can call to mind, without renting it selfe, and powring out teares of bloud for our manifold sinnes: wherin hath been the fault, that the light of the sonne of God, hath been so often

often frustrate, and hidden from vs.

But woe be vnto them that liue within the shadowe of such an eclipse, for it bredeth an eternall death, and spirituall famine, farre worse then the death of the body, or famine of victuals. Lord be pleased that deliuer vs from this death and famine, Amen.

Astronomicall Elections, briefely described, for administration of Phisick.

AS in all other parts of Phisick, so in Phlebotomy or letting of blood, first skilfully and circumspectly is to be considered, and certainly knowne the cause, Whether it be needfull and good to the Patient, as that it be to purge the body of some vnnatural, naughty, and superfluous humor, &c. for otherwise letting of blood is very dangerous, and oppresseth a way to many grieuous infirmities. And note generally, that it is not conuenient either for a very leane and weake man, or for a very fatte and grosse man to be let blood, neither for a childe vnder 14 yeres of age, and an old man aboue 56. Now there remaineth to be considered, how it standeth with the Patient inwardly, for his complexion and age, and outwardly, for the time of the yeare, the time of the day, and dyet.

For the complection let blood as followeth.

Phlegmaticke, Melancholie, Cholericke, Sanguine.	The Moone being in	Aries or Sagi. Libra or Aqua. Can. or Pisces, either of these.

For the parties age, let blood as followeth.

In youth, from the change to the first quarter.
In middle age, from the first quarter to the full.
In elder age, from the full to the last quarter.
In old age, from the last quarter to the change.

For the time of the yeere.

The Spring time is good, harueſt time indifferent.

For the time of the moone.

Let not blood

The moone in Tau: Gem: Leo; Virg: or Cap.
The day before, nor after the change & full,
12, houres before, and after the quarters.
The moone with ♄ or ♂ still aspected.

The time of the day.

Morning after sunne rising, fasting. Afternoone, after perfect digest. The ayre temp. the wind not South.

Diet after bleeding.

Sleepe not presently: stirre not violently.
Use no venery: feede thou warily.

Notwithstanding, for the Phrenzie, the Pestilence, the Squinantie, the Pluritie, the Apoplexe, a continuall headach, growing of choller, or blood, a hote burning Feauer, or any other extreame paine, in this case a man may not tarry a chosen time, but incontinently with all conuenient speede he is to seeke his remedy, but then blood is not to be let in so great a quantitie, as if a chosen time might be respected.

The best times to purge in.

With Electuaries, the moone being in Cancer.
With Potions, the moone being in Scorpio.
With Pilles, the moone being in Pisces.

Other Rules for Purging.

Prepare humors, the moone in Gem: Libra, or Aquar.
Vomite, the moone being in Aries, Tau: or Capricorne.
Purge by neezing, the moone in Cancer, Leo, or Virgo.
Take Glisters, the moone in Aries, Libra, or Scorpio.
Take Gargarismes, the moone being in Cancer or Ari.
Stop Rewmes & Flus, the moone in Tau: Vir: or Cap.
Bathe for cold diseases, the moone in Aries, Leo, or Sagi.

Briefe Rules of Husbandry.

Plant and graffe, the Moone increasing, in Tau: Aqua.
Fell timber frō Midsomer til Christ: the moone increas.
Fell Coppice and Fuell in the 3 quarter.

Cut

Cut your Vines in February or March.
Geld Cattle, the moone in Aries, Sagit. or Capricorne.
Gather fruites, heards & flowers the moone at the full.
Set and sow, the Moone in Tau. Virgo. or Capri.
Remoue trees at the last quarter, in Nouemb.
Sheare sheep, & cut haire frō head the moone increasing,
I mean not shearing water-spaniels: Cut or trimming haire ouer eares and shoulders. Ob ſkenmare follius.

To keepe thy haire safely, from falling untimely,
Hot scalding Baths deny, haue wanton company:
Abstaine from venery, purge choller warily,
Let blood needfully, suffer not willingly.

A briefe rule, to knowe the time of the Fyde or full Sea, in all the principall Hauens in England: & also to knowe the houre of the night by the Moone.

The age of the Moone.	her cō ming to South	High water Lond.	Theſe houres and min. added to her cōming to South, sheweth y tides.	h. mi

To

To know the time of the Tydes, according to the Rules of the Table afore-going.

FIrst, for the time of your desire, finde the age of the Moone in the Kalender, (and note that at the first quarter, her age is vii. dayes and a halfe. At the full xv. dayes, at the last quarter xxii. dayes & a halfe: and changeth the xxx. day,) her age being found, looke in the former Table, at what time shee commeth to the South, at the same age, & to the time there found, adde the houres and minutes to be added: Following the name of the place you desire to know the Tyde, and the whole summe, sheweth your desire.

As for example, This yeere the 9 day of Januarie, the Moone is 11 dayes old. Now in this table, under the age of the Moone, I find 11 in the first space. Then I find her comming to the South at 8 a clocke, and 48 minutes, (heere note that 60 minutes make an houre.) Now for Barwick, I finde in the last space 3. houres 45 minutes, which added to 8 houres, 48 minutes (before found) make 12 a clocke, & 33. min. The time of high water at Barwick, the same 20 day of Januarie, and the like order is to be observed in all. The time of high water at London, you shall find corrected according to the observation, for each day of the moone, under the title of high water at London. &c.

To finde the houre of the night by the Moone, first find the time of her comming to the South (as before) which being noted, then repayre to a Sunne Dyall, as you would do if the sunne did shine, and mark what number of houres and minutes the shadow of the Dyall doth want of the South poynt, of xii. a clocke, so much doth it then want, of the time found in this table, and looke how much the shadow is past xii. so much is the houre past that is found in the Table.

As for example, The 9 day of January, the Moone

is

is 11. dayes old, her South poynt (in the foreland table) is 8 a clocke, and 48 minutes, that is, ¾. quarters of an houre, and 3 minutes past 8, and I finde her shadow in the Drall at tenne, which lacketh two houres of 12, at the South. Therfore it wanteth two houres of 8. and 3. quarters. I conclude, it is 3 quarters past 6. a clocke.

But yet I would haue you to know, that the Moone hath no such certaine time of rising, and setting, according to her age, As of her comming to the South: neither at her full, doth shee rise, or set, at sunne rising, or setting, but onely at the time of an Eclipse, as hereby I shew more at large. The Sunne or Moone bering in the South, are alwayes vpon the 12 a clock poynt, but being vpon the Horizontall, East, or west poynt, they are not vpon the poynt of 6 a clocke, (as many ignorant Marriners haue accounted,) Neyther vppon the Southeast, or Southwest, is it 9, or 3 a clock, &c.

A necessary Rule of Numeration, for such as are ignorant therein.

First learne to know these nine figures.

i. ii. iii. iiii. v. vi. vii. viii. ix.

1. 2. 3. 4. 5. 6. 7. 8. 9.

Then learne what each figure is in his place, as thus, 54021.

The figure of one in the first place is but one, 2. in the second place, is tenne times himselfe, that is 12. o in the third place, (of nūbers) is nought, 4. in the fourth place, is so many thousands: 5. in the fift place, is so many tenne thousands, &c. The totall is fifty four thousand, one and twenty.

The like is to be obserued in all other summes.

A perfect

¶ A perfect Table, shewing the Returne, or Essoyne dayes. The day of Exception. The day of Returna Brevium. And the day of Appearance of Iuries in the Common Pleas. Published for the generall good of all men, whose affaires tend thereunto. The vse whereof is this. A writ is returnable in Quindena Martini, that is, the 25 of Nouember, being Essoyne day. The 26 is the day of Exception. The 27 Returna Brevium. And the 28 day being Friday, is the day of Appearance. &c.

Note the figures follow at the first, and last dayes of appearance, as the first and last dayes of the Terme.

A Perfect Rule for Memorie Returnes & Termes: to notifie.

The first of Hillarie Terme shall be,
In January, the twentie three:
And on the fortieth Februarie
This Terme doth end most certainly.

Hillarie Terme hath 4. returnes. { Octabis Quindeno Hillarij, Crastino. Octabis purifi.

And Easter Terme from Easter day,
The wednesday fortnight gins alway:
And when thy ascention day is past,
Still munday next this Terme doth last.

Easter Terme hath 4 returnes. { Quinque, mense. Tres Quindene, Pasche, Crastino Ascensi.

The friday after Trinitie,
This Terme begins assuredly,
And as our Lawyers all doe fortight,
It ends the wednesday fortnight.

Trinitie Terme hath 4. returnes. { Crastino, Trinitie Octabis. Quindeno, & tres Trinitatis.

To Michaelmas Terme, you seeke to finde,
The ninth of October beare in mind,
And ends as I doe well remember,
The twentie eight day of November.

Michaelmas Terme. hath eight returnes. { Octabis. Quindeno, Tres Michis. Mense Michi. Crastino animarum. Crastino martini. Octabis. Quindeno martini, & Finis.

The Exchequer opens certainly,
Eight dayes before the Terme begin,
Except the Terme of Trinitie,
Which onely foure dayes hath beene.

FINIS.

28 8br – weston began. /.

2. 8br. Georg Beaco came to me. /.

Matthew 1606.

A new Almanacke

and Prognostication for the yeare of our Lord God, 1606.

Being the second from the leape yeare.

Made and set forth by arte, by William Matthew of Reigate in the Countie of Surrey, Practicioner in Phisicke and Student in Astronomie.

Rectified for the Meridian of Reigate, serving most directly for the South partes, and generally for all England.

Nascēdo morimur vita altera morte paratur,
Vita hæc mors, mortis funera finis erunt.

Imprinted at London for the company of Stationers.

THE CONTENTS OF THIS present Almanacke and Prognostication for this yeare of our Lord God, 1606.

The golden number is xi.
The circle of the sunne is xix.
The Epact is i.
The Dominicall letter is d
Indiction of Rome is iiii.
Intervallum or space between Christmas and Shrove sonday is ix. weekes and iiii daies.
Shrove sonday is the second day of March.
Ashwednesday the fift day of March.
Quadragessima or the first sonday in Lent is the ix. day of March.
Easter day the xx. day of Aprill.
Ascension day the xxix. of May.
Whitsonday the 8. of June.
Trinitie sonday the 15. day of June.
Certaine rules of Astrologie very necessary.
Item for rising and setting of the sunne.
Item a perfect rule to knowe the planetary houres throughout the yeare.
Item dangerous daies to fall sicke, or to take phisicke are marked in the Calender with this marke ( )

A briefe and a necessarie rule to knowe the beginning and ending of euery Terme, with their returnes.

Hillarie Terme beginneth the 23. day of Januarie, & endeth the 12. day of Februarie, and hath these foure returnes: that is to say,

Octabis Hillarij	}	{ Crastino Purificat.
Quind. Hillarij	}	{ Octabis Purificat.

Easter Terme beginneth the 17. day after Easter, and endeth the monday next after Ascension day, and hath fiue returnes: that is to say

Quind. Paschæ	} Mense Paschæ {	Quinque Paschæ
Tres Paschæ		Crastin. Ascensionis.

Trinitie Terme beginneth the 11. day next after Trinitie sonday, and endeth the wednesday fortnight after, and hath foure returnes: that is to say,

Crastin. Trinitatis	}	{ Quind. Trinitatis
Octab. Trinitatis	}	{ Tres Trinitatis

Michaelmas Terme beginneth the ninth day of October, and endeth the 28. day of November, and hath eight returnes: that is to say

Octab. Michael.	}	{ Crastin. Animarum.
Quind. Michael.	}	{ Crastin. Martini.
Tres Michael.	}	{ Octab. Martini.
Mense Michael.	}	{ Quind. Martini.

Note also that the Exchequer openeth eight daies before any Terme begin, except Trinitie Terme, in which it openeth but foure daies before.

THE ANOTOMIE OF MANS
body, as the parts thereof are gouerned by the
12, celestial Signes.

Ianuarie hath xxxi. daies.

Warme meats this moneth conuenient be,
Flie slouth, sweete drinkes, be rulde by me:
VVhite wines also as wholesome is,
Bleede not, nor bathe, forget not this.

Mathew. 1606.

A Prognostication

for the yeere of our Lord God, being the second from the leape yeare, 1606.

Made and set forth according to Art, by William Mathew of Rigate in the county of Surrey, Practicioner in Phisicke, and student in Astronomie.

Grana velut putrefacta meditantur aristas,
Corpus sic gignunt ossa sepulta nouum.
Qui moritur domino, mors sua vita pia est.
Mors beata vitæ initium.

Imprinted at London for the *Companie of Stationers.*

(∴)

A Supplication
for the weal of our Lord
God [illegible]
the
[illegible]

Phisicall obseruations.

CErtaine Elections are to be chosen by the course of the Moone, in any signe of ye Zodiacke, and first of Phlebotomie, or blood letting. In the Spring, let blood at the right side: and in the fall of the leafe, at the left side.

From the change to the first quarter, a meete time to let young men blood.

From the first quarter to the full, good for middle-age.

From the full to the last quarter, apt for aged folkes.

From the last quarter to the new Moone or change, best for old folkes.

The Moone in ♈ ♐ For the Phlegmatique, the head and thighes excepted.

The Moone in ♌ ♒ For the Melancholique, buttocks and legges excepted.

The Moone in ♋ ♓ ♏ For the Cholerique: brest, members and feet excepted.

Laudable aspects of the Planets, are to be obserued in letting of blood, and taking of Purgations.

The coniunction of the Moone with ♃ ☿ Is the best time to let blood, so that Venus be not combust, or vnder the beames of the Sunne.

Trine or Sextile of the Moone with { Saturne, Sol, Venus, Mercury } It is good to let bloud, and spetially when the Moone doth apply to Iupiter and Venus.

A Quadrate of the Moone with { Saturne, Venus } It is conuenient to let bloud, and also opposition with them is good.

Of the Moone with Mars. { Trine, Sextile } It is reasonable good to lete bloud.

The Moone being in these Signes.

In Cancer and with Sextile or Trine aspects. — Of Venus it is good to purge choller. Of the sun or Mars to purge phlome. Of Iupiter to purge Melancholy. — with cleere arirs.

In Scorpio and with Sextile or Trine aspects. — Of V. to purge cho. Of the sun or Mars to purge phleme. Of Iupiter to purge Melancholy. — with Doble ons.

In Pisces and with Sextile or Trine aspects. — Of V. to purge cho. Of the sun or Mars to purge Phleme. Of Iupiter to purge Melancholy. — with Peller.

To enter into Bathes for hot Diseases.

The Moone in { Scorpio, Cancer, Pisces } for cold Diseases { Aries, Leo, Sagitari.

[illegible] Gemini. { Leo, Aries, Capricorne.

To take Gargarifes. { The Moone in { Aries, Cancer, Capricorne.

To stoppe Fluxes, Rewmes, & Laces. { The Moone in { Taurus, Virgo, Capricorne.

To take preparatiues { The Moone in { Aries, Leo, Sagittarius.

To take Glisters, the Moone in { Libra. Scorpio.

Good to comfort the vertue { Attractiue. Retentiue. Digestiue. Expulsiue. } The Moone in { ♈ ♌ ♐ ♉ ♍ ♑ ♊ ♎ ♒ ♋ ♏ ♓

To cut haire that it may the better grow in ♉ ♍ ♎, and the Moone increasing.

To geld or cutte Cattell in ♐ ♑ ♓, and the Moone decreasing.

Good to sow or set ♉ ♋ ♍ ♎ ♑, and the Moone decreasing.

To graffe or plant, in ♉ ♒ and the Moone increasing.

To cut Vines, in ♈ ♍ ♎, and the Moone increasing.

To cut or fell wood or Timber from S. Barnabies day, till the first Calends of Ianuarie in the wane of the Moone.

To remoue Graffes or young Trees at the last Quarter of the Moone.

The Caractars of the xij. signes, seauen Planets, Coniunction, Sextile, quadrat, Oppositon, be thus figured or marked, that euerie bodie may know and vnderstand them, as they be here set downe.

The xij. Signes.

♈ Aries. ♉ Taurus. ♊ Gemini. ♋ Cancer.
♌ Leo. ♍ Virgo. ♎ Libra. ♏ Scorpio.
♐ Sagittari. ♑ Capricor. ♒ Aquari. ♓ Pisces.

The vij. Planets.

♄ Saturne. ♃ Iupiter. ♂ Mars. ☉ Sol. ♀ Venus. ☿ Mercurie. ☾ Luna.

☌ Coniunction. ✶ Sextile. □ Quadrat.
△ Trine. ☍ Oppositon.

The Dragons head, and Dragons taile, are thus marked.

☊ Dragons head. ☋ Dragons taile.

A Description of the foure quarters of the yeere, and a Declaration of the disposition of the same.

The Winter quarter, wherewith we vsually begin the yeere, made entrance the last yeere 1605. the 11. day of December, about nine of the cloche at night, which time the sunne made his entrance into the first minute of Capricorne, and it is the shortest day in the yeere, and so the Winter doth continue vntill the eleauenth day of March following.

This part of this yeere by naturall inclination, is of qualitie cold and moyst, forasmuch as I doe find in the ascendent or first house Leo which is hot and drie, triplicitie of the fire: and the Sunne Lord of the Ascendent placed in the fift house. Mars placed in the iii. house in Libra, the house of Venus; Iupiter and Venus placed in the vi. house: Saturne and Mercurie in the fift house, being the house of Iupiter which is the 17. degree of Sagitarie. I doe gather it will be a drie and warme Winter, yet some hard Frosts and cold winds in the latter part of the Winter. The sicknesses at this time is drie coughes, shortnesse of winde, much head ach, and the Podegra or gout in the feet, and the Sciatica and Joynt aches, and such like diseases.

Of the Spring.

The Spring beginneth this yeere about the eleauenth day of March, betweene the houres of 11. and 12. of the cloche at midnight, then the sunne doth enter into the first minute of Aries, at which day the sunne doth rise at vi. of the cloche, and setteth at vi. of the cloche, so making the day

and night equall throughout all the world: and the Spring continueth vntill the 21. day of June next following. This quarter is naturally hot & moyst, and the best time (as Hippocrates saith) for to take Phisicke. Concerning the temperature of the weather, I doe gather it will be a hot & a drie Spring, cleere ayre and hotte sunne-shining, greene leaues flourishing before Easter, so that it will be a verie forward Spring, forasmuch as I doe finde a drie and hotte signe in the ascendent which is Sagitarie, a triplicitie of the fire, which is hot and drie, and Iupiter Lord of the Ascendent placed in Aquarie entring into the 2. house, the sunne in the 4. house, placed in Aries, Mars entring into the 12. house, Saturne placed in his owne house, which is Capricorne being the second house, Venus in the fift house, Mercurie in the third house, and the Moone placed in Leo, being in the ninth house. So that I finde all the Planets vnder the earth, sauing the Moone.

The diseases for the most part which are like to raigne at this time will be hot burning Feauers, as plurisies, the small Poxe, Measles, red bleared eyes, and such like, and much amongest young men, and young women.

Prediction of Summer.

SUmmer the third part of the yeere, will take his beginning the 21. day of June, betweene the houres of 9. and 10. of the cloche at night, for then the sunne doth enter into the first minute of Cancer, and will continue vntill the xiii. day of September, which time then is the longest day, & shortest night: this time by his proper nature, is hot and drie, and of the fiery triplicity.

Concerning

Concerning the disposition of the weather, I do gather it will be a hot and drie Summer, dry and cloudie, because I doe find in the Ascendent or first house Capricorne, which is an earthly signe dry, and Saturne which is lord of the ascendent, entring into the 12. house, and the sunne placed in the 6. house, Iupiter in the second house, Venus in the 4. house, Mars entring into the 10. house, Mercurie in the 5. house, & the Moone in the Ascendent. So that the weather will be hot and drie, which will breede many diseases, & strange burning Feauers of all sorts, much paine in the head, stranguric, and the colliche, &c.

Harvest, or fall of the Leafe.

HArvest, the fourth part of the yeere, doth take his beginning the 13. day of September, and continueth until the 12. day of December then next following, for then the Sunne doth enter into the Equinoctiall signe of Libra, for then the daies and nights be of one length. This time will be drie, cloudie, and much windes, I did thinke good to speake something concerning this yeere. This time doth signifie long sicknesses, as quarterne Feauers, and strange griefes. Also young men shal then be sicke and in ieopardie of death, and young women the like. And in sundrie places shall happen a famine, with great drue of strange newes, and there is also to be feared the greeuous passions of the heart, distraught of mind, Corne at a reasonable price, and plentie of Oyles and Wines. God of his mercie turne all to his pleasure, & our profite, so that after this troublesome life, wee may haue with him life euerlasting. Amen.

First Quarter the 26. day at 5. of the cloche and 5. minutes in the morning verie cold and hard frost, 27, 28, and 29. dayes it freezeth hard. 30, and 31. it thaweth and darke weather.

Here followeth briefly certaine Rules, working by Astronomie to be had in memorie for auoyding cariage of Bookes.

A readie way to get the Golden number or Prime without a Table.

ADde vnto the yeere of our Lord 1. then diuide the summe by 19. the remaine is the Prime or Golden number.

The Epact is thus euer found.

TO finde out the Epact of each yeere, doe thus, to the Epact of the yeare that last went before that yere, for which you would find the Epact, adde 11. and the sum of these two make the Epact, if it surmount 30. then take 30. out, & that which resteth aboue 30. is the Epact you desire.

A Rule to know the age of the Moone at all times, by the Epact.

THe Epact knowne, to knowe the age of the Moone, ye must haue 3. numbers. The first is the Epact, the second, the number of the moneths from March, (including both;) the third, the dayes of that moneth passed: then ioyne these 3. numbers together, if they rise not to 30. so old is the Moone, if they passe 30. being left, they also are the age of the Moone, this is meant by the Moone that haue 31. dayes, for in them that haue

but

but 30. dayes, the coniunction is at the 29. day, and they that passe 29. are the age as bebyte.

As for an Example.

THis yeere 1606. for the 15. day of August I would know the age of the Moone: first the Epact is 1. and the moneths from March to August, are 6. and 15. the day of the moneth, which put altogether maketh 22. which is the age of the Moone that day, so that the Moone is 22. dayes old the 15. day of August.

Another Example.

THis yere for the 26. day of September, I would know the age of the Moone, the Epact being 1. the moneths from March to September are 7. and 26. the day of the moneth with all added together maketh 34. from thence I take 29. for because September hath but 30. dayes, and there resteth 5. the age of the Moone for that day, and in like manner shall we giue to Februarie 29. dayes of the Moone.

A Rule to know the change, full, and quarters by the Epact euerie moneth in the yeere, without Booke.

AND to know the day of the change, doe thus: to the Epact, ad all the moneths from March, and if they ioyned together come not to 30. looke what they lacke of 30. and at so many dayes

of the moneth, the Moone changeth, as for an example, this yeare of our Lord, 1606. the Epact is 1. and July from March is 5. moneths, which added together make 6. from which take from 30. (because July hath 31. dayes) and there resteth 24. dayes; so that vpon the 24. day the Moone changeth. And to know the full or opposition, adde to the change day 14. dayes, 18. houres, and for the other aspects, see this little Table that followeth.

To the conjunction for	To the full for	adde	d.	ho.
			4.	12.
			7.	9.
			9.	20.

A notable Rule to know what Planet rules any houre throughout the yeere.

Gouernours of the day.	Sunday.	Monday.	Tuesday.	Wednesday.	Thursday.	Friday.	Saterday.	Rulers of the night.
Sol.	1	12	9	0	10	0	11	Jupiter.
Venus.	2	0	10	0	11	1	12	Mars.
Mercury.	3	0	11	1	12	2	0	Sol.
Luna.	4	1	12	2	0	3	0	Venus.
Saturne.	5	2	0	3	0	4	1	Mercury.
Jupiter.	6	3	0	4	1	5	2	Luna.
Mars.	7	4	1	5	2	6	3	Saturne.
Sol.	8	5	2	6	3	7	4	Jupiter.
Venus.	9	6	3	7	4	8	5	Mars.
Mercury.	10	7	4	8	5	9	6	Sol.
Luna.	11	8	5	9	6	10	7	Venus.
Saturne.	12	9	6	10	7	11	8	Mercury.
Jupiter.	13	10	9	11	8	12	9	Luna.
Mars.	14	11	8	12	9	0	10	Saturne.

The vse of this Table.

VNder the day of your request, seeke the houre that ye desire, then on the left side right there against shall ye see the Planet that gouernes that houre by day, and at the right side the Planet that rules by night (as thus.) On Thursday the third houre of the day rules Sol, and the eight houre of the night gouernes Luna, and so of the rest.

A Ta-

A Table to know the length of the planetarie houre, from the ſhorteſt day and longeſt night, till the longeſt day and ſhorteſt night, for all the yeere.

M.	0.	12.	24.	36.	48.
H.	H.M.	H.M.	H.M.	H.M.	H.M.
7	0.35	0.36	0.37	0.38	0.39
8	0.40	0.41	0.42	0.43	0.44
9	0.45	0.46	0.47	0.48	0.49
10	0.50	0.51	0.52	0.53	0.54
11	0.55	0.56	0.57	0.58	0.59
12	1. 0	1. 1	1.2	1. 3	1. 4
13	1.50	1. 6	1.7	1. 8	1. 9
14	1.29	1.11	1.12	1.13	1.14
15	1.25	1.16	1.17	1.18	1.19
16	1.20	1.21	1.22	1.13	1.24
17	1.25	1.26	1.27	1.28	1.29

The vſe of this Table.

KNowe the length of the day or night that yee require by the Table proceeding in houres and minutes, and therewith enter this Table the houre and the neereſt minute at the head, and then deſcend right againſt your houre, and there in the common Angle, ſhall yee finde the houre and minute or minutes, onely that the Planet raigneth by the houre of the clocke.

As

As for Example.

The 12. day of June, the day is 16. houres long and 20. minutes, wherwith I enter this Table as is shewed, and in the Angle, I finde 1. houre 22. minutes, which sheweth that a Planet that day rules an houre and a quarter, and 7. minutes of the clocke. Also the same night I finde it but 7. houres 40. minutes, wherewith I enter this Table with 7. at his side, and 36. minutes at the head (for that is neerest) and in the common Angle I finde but onely 38. minutes, which sheweth that a planet that night rules but onely halfe an houre, and 8. minutes of the clocke, and so of the rest in order.

A Table to know how long the Moone ſhineth, and when ſhee riſeth and ſetteth throughout the yeere: a notable rule and worthy to be noted,

The age of the Moone entre.	The houres ſhe ſhineth.	Her age decreaſing.
Luna	H. m.	Luna
1	0.48	29.
2	1. 36	28.
3	2.23	27.
4	3.12	26.
5	4. 0	25.
6	4.48	24
7	5.36	23.
8	6.24	22.
9	7.12	21.
10	8. 0	20.
11	8.48	19.
12	9.36	18.
13	10.24	17.
14	11.12	16.
15	12. 0	15.

The vſe of this Table is thus, the age of ỹ Moone once known and found in the ſide of the Table then anſwering thereunto, ſhall yee ſee the houres and minutes of her ſhining to bee counted from the ſun ſetting, all the increaſing to the full, and til then ſhe ſhineth in the euening, & after the full, ſhe ſhineth before the ſun doth riſe, as the Table ſheweth: and for riſing & ſetting doe thus; All the increaſe adde to ỹ houres of ỹ ſun riſing, the houres found in the Table, and it ſheweth the houres of her riſing. Again adde to the houres of the ſun ſetting, the houres and minutes found in the Table, & that is the houres of her ſetting. Then after the full for her riſing, doe thus: from the ſun riſing take the houres found in the Table, and the reſt ſheweth the riſing and from the houre of the Sunne ſetting, take the houres found in the Table, borrowing 12. if the Subſtraction cannot elſe bee made, and the reſt ſheweth the ſetting of the Moone.

All

All theſe aforeſayd by example ſhall be made plaine, that euerie one may vnderſtand.

THis yeare, the xviii. day of March, the Moone is xx. daies old, wherewith I enter the Table, the Moone decreaſing, and I finde viii. houres anſwearing thereunto, ſo I ſay the Moone doth ſhine viii. houres in the morning before the Sunne doth riſe, and the ſame day the Sunne doth riſe about fiue of the clocke and 40. minutes, wherwith I put 12. elſe could not the ſubſtraction be made, and it maketh xvii. houres, from the which I take 8. houres, and there reſteth 9. houres, ſo then the Moone doth riſe at nine of the clocke, & 40. minutes before midnight.

Another Example.

THe viii. day of March the Moone is x. dayes old this yeere, wherewith I enter the Table the Moon encreaſing, & I find viii. houres anſwering thereunto, which ſheweth that ☽ moon doth ſhine viii. houres in the euening after the Sunne is ſet, and the Sunne the ſame day doth ſet about vi. of the clocke, to the which I put viii. the houres of the Table, and it maketh xiiii. houres, from which I take xii. which is midnight, and there reſteth two houres, which ſheweth the Moone ſhall ſet the ſame day at two of the clock after midnight. Likewiſe the ſame day the Sunne doth riſe about ſix of the cloch & vii. minuts, to the which I adviii.

and

and it maketh xiiii. houres, & vii. minutes, from it I take xii. (for that is noonetide) and there resteth two houres & vii. minutes, so that it sheweth that at Two of the clocke vii. minutes after noone the Moone riseth, though to vs vnseene: and so of all other times.

A notable Rule to find out Easter for euer.

In March after the first C.
Looke the Prime where euer it be,
And if the Prime on Sonday be,
Then reckon that for one of the Thre.

The Yeare what it is.

A yere hath
- By the course of the Sunne, xii. moneths.
- By the course of the Moone, xiii. months.
- Of Weekes lii. that is 365. dayes, except it be leape yere, and then it hath 366. dayes.

A Rule to know how many dayes euerie moneth in the yeare hath.

Thirtie dayes hath November,
Aprill, June, and September,
Februarie hath xxviii. dayes alone,
And all the rest hath thirtie and one.

A Rule to knowe all the Vigiles and faſting dayes throughout the whole yeere.

VVIth moueable Feaſts, I will begin,
As Eaſter, Aſcention, and Whitſon Eue
The Rogation weeke, in like caſe, (men
Muſt be kept as it commeth in place.
And the Apoſtles as Peter and Paule,
Iames, Matthy, with other moe,
Andrew, Mathew, and the reſt as they fall,
Bartholomew, Thomas, Iohn Baptiſt alſo:
Simon and Iude and the Purification,
The birth of Chriſt and the Annunciation,
Ember, Fridayes, and Lent as it doth come,
The Euen of All-Saints, and ſo I haue done.

FINIS.

Dade. 1606.

An Almanacke, and Prognostication in which *you may beholde the state of* this yere of our Lord God. M. DCVI.

Being the second from the Leape yeare.

Made and set forth by Iohn Dade Gentleman, practitioner in Physicke.

Imprinted at London for the company of the Stationers.

Cum priuilegio.

The Contentes of this present Almanacke for this yeare of our redemption.

1606.

From the Creation of the world.	5568
From the Conquest of England.	540
The Kings Maiesties Reigne.	3
The Golden number is	10
The Epact is	12
The Cicle of the Sunne.	19
The Dominicall Letter	G
Inductio Romana.	4
Septuagesima the 16 of Februarie.	
Quadragesima the 9. of march.	
Easter day the 20 of Aprill.	
Rogation Sunday the 25. of May.	
Ascension day the 29. of May.	
Whitsunday the 8. of June.	
Corpus Christi the 19 of June.	
Aduent sunday the 30. of November.	

Betweene Christmas and Septuagesime are 9. weekes and foure daies.

Physicall Obseruations.

GOod to let the Sanguine blood, when the moone hath her course in Pisces.

Good to let the Choller icke blood when the Moone is in Cancer or Pisces.

Good to let blood the Melancholicke the moone being in Libra Aquarius or Pisces.

Good to let blood the Phlegmaticke, the Moone being in Sagitarius or Aquarius.

Good to giue part Purges when the Moone is in Gemini, Libra or Aquarius.

Good to purge with Clisters, the Moone being in Cancer.

Good

Good to purge with Pilles, the moone being in Piſces.
Good to purge with potions the moone being in Scorpio
Good to take vomits when the moone is in Tau. Capr. and the latter part of Sagitarius.
Good to purge the head by neezing when the moone is in Cancer Leo or Virgo.
Good to take Clisters the Moone being in Aries, Canc. Libra or Scorpio.
Good to lay Iuices and Ointments when the Moone is in Taurus, Virgo or Capricornus.
The beſt times to bathe, are when the moone is in Canc. Libra, Sagitarius, Aquarius or Piſces.
Cut the hayre of the head and beard, the moone being well ſeated in Libra, Sagitarius or Piſces.

Breefe Obſeruations of Husbandrie.

Set, Sow ſeeds, fruit and plant, the Moone being well ſeated and in Taurus, Virgo or Capricornus.
And all kinde of Corne in Cancer.
Graffe alſo when the moone is increaſing, and in Taurus or Aquarius.
Cheare Sheepe the moone increaſing.
Fell dry Timber from the full to the change.
Fell Wood, Copice and Couert, at the firſt quarter.
Libbe and geld Cattle, the moone in Aries, Sagitar. or Capricornus.
Kill fat Swine for Bacon, the better to keep their fat in boyling, about the full moone.

¶ The Anatomy of mans bodie, as the partes thereof are gouerned by the xij. Celestiall signes.

DADE. 1606.

A Prognostication, in which you may behold *the state of this yeere of* our Lorde God, 1606.

Being the second from the Leap yeere.

Made and set forth by John Dade, *Gentleman, Practitioner in Physicke.*

LONDON

Printed for the Companie of Stacioners.

¶THE DISCRIPTION of the foure Quarters of the yeere, and first of Winter. 1606.

Sol in ♑. ♒. ♓.

WInter by Astronomicall computation, beganne the xii. day of December last past, at the entring of the Sunne into the first degree of Capricorne, at which time the Sunne is farthest from our Zenith, or verticall poynt, being the shortest daym the yeere, which Winter doth continue vntill the xi. day of March next following. This quarter according to the vsuall disposition thereof, is of the nature of the Water, that is, colde, & moyst, and therefore aptly compared to the flegmatique complexion, &c. But this quarter many times as well as the rest, doth much degenerate from those particular inclinations whereunto they are properly addicted. Yet as touching this present Winter, I suppose by coniecturall probabilities, it will effect and bring forth the weather not farre vnfitting his naturall disposition, as may be seene in the daily disposition thereof.

Diseases like to inuade and vexe mens Bodies within this Winters reuolution, are Feuers of diuers sortes, Retumes, Coughes, Catharres, Hoarsenesse, sore Eyes, payne in the Thighs & Knees, the Dropsie, greeuous Headaches, Toothaches, weakenesse in the Backe, griefe in the breast and Stomacke, and such other verie greeuous, as well to the aged as young folkes.

Of the second quarter of the yeere, called the Spring.

Sol. In ♈ ♉ ♊.

The seconde parte of this common yeere, called the Spring: which of Hyppocrates and all other Physitians, is esteemed the most wholsome and pleasant part therof, beginneth this yeere the xi. day of March, the Sunne then entring into the first Min: of the Æquinoctiall signe Aries, so causing the Vernall Aequinoctiall, and making the Artificiall day equall with the night throughe the Worlde, the Sunne then rysing at fyr in the morning, and setting at fyre at night. The naturall temperature of this quarter is hotte and moyste, and therefore is accounted the fittest time in the yeere to ease diseased bodies in, and to restore healthy againe to those in whome it hath bene decayed, by the helpe and benefite of Physicke. As touching the condition of this present Spring. I am induced by many circumstances, to thinke, that it will not much degenerate from the proper kinde, whose state and condition may be seene in the daily disposition of the weather.

The common diseases this quarter shall not much differ from those before rehearsed in the Wynter revolution, besides Plentifies, Joynt ache, obstruction in the Lungs, paine in the Wydike, Frenzies, newe Agues, Crampe, Gowte, Scabbes, with such like.

Of

Of the third quarter of the yeere called Sommer.

Sol. in ♋ ♌ ♍

The Sommer season being the third parte or quarter of this yeere. 1606. taketh his beginning at the Sunnes departure from the last degree of ♊. into the beginning of ♋ which is the Actuall or Sommer Solstice, making the longest day & shortest night in the yeere. This part or quarter of the yeere is inclined by course to be hotte and drie. Wherfore it is compared vnto fire. At this time, doe hotte cholleriche humours more abundantly raigne and rage in mans bodie, then in any other quarter of the yeere. And now by the course of the heauens, and present condition of the Starres and Planets, I gather, that it will fall out farre vnfitting the due course thereof, as may be seene in the daily inclination of the weather.

The sickenes at this time are diuers, as well threatened to men as women, namely hotte burning agues, pluriſies, phrenzies, hotte Apoſtumes, diuers paines in the head, sundrie inflammations, with some strange and newe infirmities, proceeding especially of hotte cholleriche humours, wherewith many shall be vexed, and not a fewe bereft of their liues this quarter.

Of the second quarter of the yeere, called the Spring.

Sol. In ♈ ♉ ♊.

The seconde parte of this common yeere, called the Spring: which of Hyppocrates and all other Physitians, is esteemed the most wholesome and pleasant part thereof, beginneth this yeere the xi. day of March, the Sunne then entring into the first Min: of the Æquinoctiall signe Aries, so causing the Vernall Aequinoctiall, and making the Artificiall day equall with the night throughy the Worlde, the Sunne then rysing at vi. in the morning, and setting at vi. at night. The naturall temperature of this quarter is hotte and moyste, and therefore is accounted the fittest time in the yeere to cure diseased bodies in, and to restore healthy againe to those in whome it hath bene decayed, by the helpe and benefite of Physicke. As touching the condition of this present Spring. I am inducted by many circumstances, to thinke, that it will not much degenerate from the proper kinde, whose state and condition may be seene in the daily disposition of the weather.

The common diseases this quarter shall not much differ from those before rehearsed in the Wynter revolution, besides Pleurisies, joynt ache, obstruction in the Lungs, paine in the Wyndie, Frenzies, drue Agues, Crampe, Gowte, Scabbes, with such like.

Of

Of the third quarter of the yeere called Sommer.

Sol, in ♋ ♌ ♍

THe Sommer season being the third parte or quarter of this yeere, 1606. taketh his beginning at the Sunnes departure from the last degree of ♊ into the beginning of ♋ which is the Aestiual or Sommer Solstice, making the longest day & shortest night in the yeere. This part or quarter of the yeere is inclined by course to be hotte and drie. Wherefore it is compared vnto fire. At this time, doe hotte cholleriche humours more abundantly raigne and rage in mans bodie, then in any other quarter of the yeere. And now by the course of the heauens, and present condition of the Starres and Planets, I gather, that it will fall out farre vnfitting the due course thereof, as may be seene in the daily inclination of the weather.

The sickenes at this time are diuers, as well the easyest to men as women, namely hotte burning agues, plurises, phrenzies, hotte Apostumes, diuers paines in the head, sundrie inflammations, with some strange and newe infirmities, proceeding especially of hotte cholleriche humours, wherewith many shall be vexed, and not a few bereft of their liues this quarter.

Of the fourth quarter of the yeere called Autumne.

Sol in ♎, ♏, ♐.

THe fourth part or quarter of this yeer is called Autumne, or otherwise the fall of the leafe, being the last part of this yeere. It taketh beginning when the Sunne entreth into ♎ being the xii. of September, the daye and night now being of equall length as before in the spring, & so this quarter of Autumne shall continue until the xii. daye of December next ensuing, at which time the next Hyemal or common Winter quarter shall beginne to take place.

This season is naturally inclined to be colde and drye, and therefore fitly compared to the Earth: I gather by my Calculation, that this quarter for the greatest parte, will fall out reasonable kinde and naturall, being much disposed to lowde and boysterous windes, as it commonly vseth to bee, but howe the Ayre will bee inclined throughout all this quarter, may bee seene in the daily disposition of the season.

Touching sicknesses and diseases most doubtfull to afflict the body, are quartaine Agues, black Jaundize, windes about the mydriffe, Cramps, Stitches, ache in the Joynts, Sciatica, the Gowt with other sicknesses, very greevous. Call vppon God, to extend his accustomed mercy, and graunt vs grace to encline to thankfulnesse, for hee is euermore inclined vnto mercie.

A briefe

A briefe note how the ſeauen Planets are placed about the Earth in the Skie, or vnder the Earth, for euerie Moneth after Sunne is downe, by which you may perceiue howe they keepe their motion Night and Day all the yeere. Moreouer, the good dayes of Sympathie, touching mans Complexion and bodie in cauſes of adminiſtration of Phyſicke, or ſuch like: And alſo the Euill dayes, according to the malcuolent aſpects of Planettes, in which it is daungerous to let Blood, take Vomits, Purgations, Sweats, or ſuch like attempts.

Of Ianuarie.

☽ Is vnder the Earth at Sunne ſetting.
♂ Is to bee ſeene nigh vnto Heauen in the morninge.
☿ And ♀ goe downe with the Sunne.
♃ Is in myddle Heauen at Sunne ſetting.

The firſt daye ſome ſmall fall of moyſture, the ii. and iii. dayes apt to the tyme, the iiii. and v. dayes fowle weather, with increaſe of wyndes.

Firſt Quarter on Sunday, the vi. day, about one of the clocke in the morning, the vi. day a Thundring noyſe, the vii. viii. and ix. dayes, ſharpe wintrely weather, with pinching and

freezing windes. The v. daye some chaunge, the vi. day rayny and wauering, the vii. and viii. dayes, apt to the time.

Full Moone on Tuesday the xiiii. day, about iii. of the clocke in the morning, the viii., and xv. dayes the winde aloft, and plentie of moysture falleth, the xvi day faire, the xvii. and xviii. dayes great windes, with some fall of rayne, or other moysture, the xix. and xx. dayes faire and seasonable.

Last Quarter on Tuesday, the xxi. day, about iiii. of the clocke in the afternoone, the xxi. xxii. xxiii. xxiiii. xxv. xxvi. and xxvii. dayes, varietie of winterly weather.

New Moone on Tuesday the xxviii. day, at vii. of the clocke, xxxi. minutes in the morning, the xxviii. day some fall of snowe, the xxix. day windie and wauering, the xxx. day faire, the xxxi. day windes bring some moysture.

Gresham. 1606.

A Prognostication for this present yeare of our Lord MDCVI.

Being the second from Leape-yeare.

Argued from the variable Configurations and Characterie, delineate and formed by the seuerall position of the seauen prime-moouable bodies mutually to one an other, and to the Sunne and the other fixed Orbs: expressing many such euents as are generally incident into this whole systeme of our inhabitake, but more specially the circuit of this Empyre, and most properly the scituation of the Honorable Cittie of York.

With many other rules and directions prefixed and inserted to the same: to the great profit of such as shall haue occasion to vse them. The particulars wherof are seuerally set downe in the page following.

LONDON
Imprinted for the Company of Stacioners. 1606.

THE CONTENTS OF THIS PROGNOSTICATION.

THE beginnings, returnes, and ends of euery Terme: The length of euery vacation.

The beginning, continuance, end & time of and since the Reignes of all the Kings since the Conquest.

The Tydes in and about the chiefest Ports of this Empire and coasts adioyning.

Medicinall and husbandly obseruations.

The foure quarters of the yeare with their inclinations.

The affects of the moueable *Orbe*, the beeginning of euery moneth.

The changes, falls, and quarters of the Moone, for this whole yeare.

The dayly disposition of the Ayer.

The accidentall disposition and nature of euery day in the yeare, good and bad.

A more particular note of the Termes and their Returnes this yeere.

Iames.	1602. March, 24.			

The explanation and vse of the Table.

OF the fiue columnes (whereof he is compoſed) the firſt beareth the names of the kings, all along from the toppe to the foote: the ſecond hath the beginning of the Reigne: the third the end: the fourth the continuance: and the fift hath the time ſince the reigne of euery king directly againſt their names, as the title to each the foure laſt columnes (generally ſeruing all the kings ſpecified in the firſt) plainly ſheweth. The vſe is this.

Looke out the kings name you deſire, and directly in the ſame parralele, the columnes toward the right hand each according to his title at his hand anſwereth your queſtion.

Example.

The beginning, ending, or length of the raigne of Edward the fourth is desired, against whose name the next columne exhibiteth 1460. March the fourth, the time when he began to reigne: the third 1483. April the ninth the end: the fourth noteth the length of his reigne 22. yeeres 1. moneth 8. daies: and the last 123. yeeres the time since he raygned, and so of the rest.

An easie methode to finde the time of high water in all or most of the principall places in and about this Empire, kingdomes and places adioyning.

In the Kalender against euery day of the moneth are noted the full seas in number, with that exactnes as is expedient in this case, which for diuerse respects cannot be very precise. For the knowing of the tydes therefore, in that place there is no more to do, but looke out the day of the moneth, and you haue your desire in houres and minutes. And for all other places adde, or take away so many houres and minutes from the time there noted, as this little tablet for euery particular point or port appointeth you, and the whole or remainder is the time of full Sea there: as:

Bristol,

		Note ho.m.

	Falm. Garnesey. Seauern-mouth. S. Mallo.	0. 45
	Foy Lin. Weymouth. Plimmouth.	0. 0

Example.

The xxvi. of February I would know the full Sea in Humber, against that day in the last column but one, in the Kalender I finde the high water there at 6. a clock, and to know the same what time it shall be at London bridge, Tinmouth, Hartlepole, Calez, Gaskoigne, or Britaine, I deduct 3. houres, as this table admonisheth, and there resteth 3. a cloche, the time of full Sea in all those places. And for the high tide at Wels flow, or Lauton I adde 45. minutes, and the whole is 6. houres and 45. min. that is 6 a clock and three quarters.

And for Douer, Bolayn, &c. adding 4. houres & a half, as this table sheweth, I finde full sea the same day at 10. a clock and halfe an houre past, and so of all the other.

Out of the Kalender also by the Moones place (there noted for euery day at noone) may be made these vses.

First the medicine with these obseruations.

That bloud be taken from the { Sanguine / Cholerike / Melancholike / Flegmatike } The moone being in { ♈ / ♉.♍.♑ / ♊.♎.♒ / ♋.♏.♓ }.

With this caution, that no bene be opened in any member appropriate to the signe, that the Moone is in that time.

Prouided also that from the age

Of { 14 / 26 / 38 / 52 } to { 26 / 38 / 52 / 64 } be chosen all the dates frō the { change / first q. / ful m. / last q. } to { first q. / full m. / last qu. / change }

Excepted: two dates before and after the change, the day before and after the full, 12. houres next either quarter, and all dayes otherwise accidentally infortunate.

That bathing bee vsed.

For grosse bodies the Moone being in { ♈ / ♌ / ♐ } for dry bodies in { ♊ / ♎ / ♒ }

And for cleanlinesse.

The Moone being in ♉.♍.♑, happily aspected with Venus.

But

But for Health.

The body being too moyst { ♈ ♌ ♐ } { too hot / let her / her in } { ♉ ♍ ♑ }
let the Moone bee in

The first with the good aspects of Soll or Mars, and the other with Iupiter or Venus.

For Purging.

That the Moone be in watry signes, and in her waxing, occasion and opportunitie otherwise fitting. But more particularly in { ♋ ♏ ♓ } to vse { Electuarie. / Potions. / Pills. }

Prouided that shee be not euill affected by ☌ Mars or ☍ Saturne.

And that

Neelings, Gargarismes, Glisters, Clysters } be vsed the Moone in { ♎.♐.♒. / ♋. and ♈. / ♈.♉. and ♓. / ♈.♊. or ♍. }

In trimming and adorning the body.

If for { cutting haire { to grow / not to grow } the ☽ { ♈.♌.♐. / ♉.♍.♑. } be in
paring the nayles ♈.♌.
cutting excrescens, warts, wens &c. the ☽ { ♋.♏.♓. / ♊.♎.♒. / ♉.♍.♑. } be in ♈.♌.♐. or ♓.

Prouided that in things you would haue to encrease, the wane and encrease of the Moone bee obserued; otherwise, the waxe and decrease.

In

In Husbandry remembring

To
- plant, set, or sow seedes, the Moone in ♈, ♉, ♊, ♋, ♍, ♎, ♏, ♑.
- sow corne in ♑.
- cut frith, coppice, and fuell the first quarter.
- sheare sheepe in the encrease.
- geld or libbe cattle in ♈, ♉, ♍.
- kill swine neere the full.

Of the foure quarters of this yeere, and first of Winter.

THe ☾ 11. of December in the yeere 1605. at 10. a cloche and 50. minutes after noone, did the plaine of this our aparoust Orbe move, in his greatest obliquitie to the Globe of light, or the Sunne (to our apparaunce) at that moment in his greatest inclination toward the South, (being in this age 23. degrees, 31. min. and 20. sec.) entered (after vulgar Astrologie) the first scruple of Capricorne: by either of which waies imagined, the northerly plaine of our Orbe (perpetuall immerged in the bale of his shadowy Cone) hath longest stay in darkenesse, and least continuance in light, or (as they usually say) made longest day and shortest night with us, and for those affects beginning the Hiemall quarter of the yeere, vulgarely taken for the first part thereof.

Touching the state of this season (the mutuall and sacreliue position of this and the other celestiue Orbes to the fount of light considered) I iudge it shall this yeere proue to be more open then otherwise, except the beginning fall out something hard and frostie.

Many Caracterismes also of Rumors, Dissentions, Disagreements, and Contentions, shall this season bee effoymed and impressed in the Aires Oceane, and received by symbolizing phantasies, to the busieng of many mens braines, disquiet of minde, and suspence of intended actions.

Of the Spring.

SO shall the Orbes of light, and this our opaconic Systeme bee disposed, that the Axis of his comicall shadow, intitling the Axis of his diurnall revolution in a right angle, his plane shall in equall time, bee objected to equall portions of light and darkenesse, saue some paralels next each his poles (modo verum sit opaticum illud: Corpus lucidum si opaco maius fuerit, maiorem opaci illuminabit partem) then of necessitie to continuall Sunshine. ☉, the Sunne (to apply our selues to common conceite) entering the first scruple of Aries, shall make the day and night a like long. all this world ouer, except (for the reason before) some parts neere the North and South poles, hauing no night at all. Which accident (either way conceited) shall happen this yeare the 10. of March, neere about 5. a cloche and 20. minutes in the afternoone, and is plainly taken for the beginning of the second quarter of the Æthronomicall yeare, vulgarly called the Spring. The fashion of which Phænomene, touching the mutuall posture of this, the other fiue moueable Orbes, and the Sunne, shall bee in manner as followeth.

his Northren moitie to fullest view of Sun-shine, and least incurrence of shadow: or, the Sunne (in appearance) in his greatest Northerlie declination (vulgarly named the first limit of Cancer) maketh to our Horizon the longest day and shortest night, and to the beginning of Summer, the third astronomicall quarter of the yeere.

This quarter aswell in regard of Orbicall position, as th'effects of the Moones Eclipse the 17. of September, and of the Earth the 2. of October the last yeere, comming now in force, the one about the 7: of July, the other the third of June now instant.

Of Autumne.

The 13. of September at one a clocke and 19. min. afternoone, our Orbe (his poles equidistanced the Hpheare of lights plaine) shall obiect his superface, to equall portions of light and darkenesse: or the Sunne (after the old fashion) seated in the beginning of ♎. (Libra the equinoctiall point) shall make the day and night a like long all this world over, (save some places adiacent each pole, according to the proportion of the Luminous Globe above the opacous, having no night at all.

If Harvest fall out well this yeere,
Then feare not Peirce, till more thou heare.

A more particular prædiction of the monthly and daily disposition of this yeare.

Ianuarie. 1606.

Saturne is become our day Starre.
Iupiter will a while be our euening Starre.
Venus sheweth beautifull in the morning.
Mercury sheweth his head vnder the Sunne.

The i. ij. iij. and viij. some while very much vnlike fair. First quarter the vi. day, xl. min. before one a cloche in the morning, and the vij. and viij. fowle as sleete.

The ix. x. xi. and xij. more hard.

Full Moone the xiiij. day at iij a cloche, and lx. min. in the morning, open weather: and the xv. xvi. xvij. not much vnlike: the xviij. xix. and xx. not very hard.

Last quarter the xxi. day, at vi. a cloche and xxxvi. min. in the after noone, promising no strong frosts.

The xxij. xxiij. and xxiiij. dryning dayes: xxv. xxvi. xxvij. disposed to snow.

New Moone the xxviij. day, halfe a quarter of an houre before viij. a cloche in the morning, and the xxix. xxx. and xxxi. kindelie.

Februarie

February.

Saturne is yet our Day Starre, and so will Iupiter be very speedily.

Venus is a glorious euening Starre.

☽ is quarter maister with the Sunne in the heauens height, whilst he peares about the Earth.

The i.☾. and iij. windy if not wet.

First quarter the iiij. day at viij. a clock at night, with the v. and vi. rough dayes. The vij. viij. and ix. like to freese, x. xi. more open and softer.

Full Moone the xij. hye, a quarter of an houre past viij. a cloche in the euening, and the xiij. xiiij. xv. and xvi. variable. The xvij. and xviij not much vnlike.

Last quarter the xix. day, halfe an houre past x. a cloche at night. The xx. and xxij. vndoubtedly February. xxiij. xxiiij. and xxv.

New Moone the xxvi. day, at vij a cloch and xxviij. min. in the euening, with the xxvij. and xxviij. most bleake.

March.

Saturne, Iupiter, and Mercurie be morning Starres. Venus shineth gloriously in the euening.

The i.☾. iij. iiij. and v. windy.

First quarter the vi. day, at iij. a cloche, and xxxix. min. in the afternoone: cold and fresh blasts most of this quarter if the xi. and xij. blow dry.

Full Moone the xiij. day, at ix. a cloche, and xxxviij.

min. in the forenoone, faire for the most part, if some North or North-east blasts prove not stormie about the xb. xbiij. xix. and xx. dayes.

Last quarter the xxi. day, neere halfe houre past tiij. a clock in the morning, worthie disposed. The xxij. xxiij. xxiiij. and xxb. conspiring.

New Moone the xxbiij. day, three quarters past ix. a clock in the forenoone very neare, and the xxix. xxx. xxxi kindely for the season.

Aprill.

Iupiter and Mercury rise before the Sunne.

Venus is our bright evening Starre.

Saturne climbs the heavens hight, whilest Sol is creeping about the earth.

The i. ij. iij. and iiij. not so wet as wished.

First quarter the b. day, neere xi. a clocke in the forenoone, fayre enough for the time, if the bi. bii. and biij. be gul'merabls.

Full Moone the vij. day, at bij. a clock and xx. min. at night, stormie, and the xiij. xiiij. xb. and xvi. dayes for the most part.

Last quarter the xix. day, neere xi. a clock before noone. The xx. xxi. xxij. and xxiij. mostly dry. The xxiiij. xxb. and xxbi. not so constant.

New Moone the xxbiij. day, halfe houre before one a clock in the morning tempestuous dayes if the sun. and xxx. consent

May

May.

Iupiter is newly come to his kingdome, but Mars is retreating in another of his dominions.

Venus is newly become retrograde.

Mercury on his owne dung-hill dareth Mars to his face.

The i.ij. and iij. doubtfull and variable

First quarter the v. day, at iij. a clock and xxv. min. in the morning, and some wet about the vi. vij. ix. and xi. day.

Full Moone the xij. day, halfe an houre past iij. a clock in the morning, growing weather for the most part of the quarter.

Last quarter the xviij. day, neare v. a clock in the afternoone, tempestious and about the xx. xxij. and xxiij.

New Moone the xxvi. day, halfe houre past iij. a clock in the afternoone, meetely temperate if the xxvij. xviij. and xxi. be not too moyst.

Iune.

Venus is newly become direct, and is now our morning Starre.

Mercurie sets after the Sunne, yet scarce to be seene.

First quarter the iij. day, at v. a clock and xij. min. in the after noone, coole blastie, if dry especially the vi. and vii. dayes.

Full Moone the x. day, at nine clocke xxvij. min. before noone, pleasant dayes, if there rich and xv. accord.

Last quarter the xvij. day, halfe houre (very neere) past v. in the morning, and the xix. xx. xxij. and xxiij.

lowring and dropping.

New Moone the xxv. day, at vi. a clock and xli. min. in the morning, disposition to thunder, and about the xxvij. xxviij. and xxx. dayes.

Iulie.

Saturne and Iupiter seeme retrograde.
Mars is newly become direct.
Venus is our morning Hearre.

The i. and ij. lowring and cloke, if rayle.

First quarter the iij. day, at iij. a clock in the morning, and the iiij. and v. wetly, if the windes keepe not aloft. The vi. vij. and viij. much like to the former.

Full moone the ix. day, halfe houre past vi. a clock in the afternoone, inconstant, and the xi. xij. xiij. xiiij. and xv. not much better.

Last quarter the xvi. day, at vi. a clock and xxxv. min. after noone. The xviij. xix. xx. and xxiij. not so pleasant as desired.

New Moone the xxiiij. day at ix. a clock, and xxvi. min. in the afternoone. The xxv. xxvi. xxvij. and xxviij. dropping. The xxix xxx. xxxi. some amends.

August.

Saturne and Iupiter both seeme to regrade.
♀ is our morning Hearre.
Mercurie is under the Sonne beames.

First quarter the first day, a quarter past high noone very neare, and the ij. iij. iiij. and v. sowreis heare with thunder and raine. The vi. and vij. meerely good.

Full

Full moone the viij. day, a quarter paſt ij. a clock in the morning, faire for the moſt part, if the viij. ix. xi. and xiij. varie not.

Laſt quarter the xv. day, at x. a clock and xxij. min. in the forenoone, wilhed weather, if the xvi. xvij. and xviij. alter not.

New Moone the xxiij. day, very neare high noone: kindely harveſt weather, if the xxiij. xxvi. and xxix agree.

Firſt quarter the xxx. day, neare a quarter paſt vi. a clock at night, night-raines.

September.

Saturne is nowe become direct.

Iupiter appeareth in the South-eaſt after Sun-ſet.

Venus is our bright day Starre.

Mercury ſtirreth after the Sun, ſcarce to be ſeene.

The i. ij. iij. and iiij. meerely good harveſt weather.

Full Moone the vi. day, a little before high noone, a kindly ſeaſon: the vij. viij. & ix. drowſie and miſtie, with likelihood of thunder: the xij. and xiij. doubtfull.

Laſt quarter the xiij. day, a quarter paſt iij. a clock in the morning very neare, ſtormy now and then, if the xiij. xv. and xvi. prove not better.

New Moone the xxij. day, xxvij. min. paſt one a clock, in the morning, indifferent good for the moſt part, if the xxiij. xxvi. and xxvij. be agreeable.

Firſt quarter the xxviij. day, at vi. a clock and xxxviij. min. in the night: and the xxix. and xxx. not greatly to be miſliked.

October.

Iupiter becometh direct very shortly.
Venus is yet our day Starre.
Mercurie is newly become retrograde.

FIrst and second windie, the iij. iiij. and v. variable.
Full Moone the vi. day, xxxviij. min. before one a clock in the morning, melch, especially the ix. x. and xi. dayes.

Last quarter the xiij. day, at xi. a clock and xxxvij. min. in the night, seasonable: the xij. xvi. xvij. and xix. consenting.

New Moone the xxi. day halfe houre and better after one a clock in the afternoone: and the xxij. xxiij. & xxiiij. like to freese: the xxv. xxvi. and xxvij. more lottie & melch.

First quarter the xxviij. day, a quarter past vi. a clock in the morning: and the xxix. xxx. and xxxi. wetly disposed.

November.

Saturne is our euening Starre.
Venus our glorious messenger of day.
Mercury riseth before the Sun.

THe i. ij. and iij. winter like.
Full Moone the iiij. day, halfe houre at iij. a clock in the afternoone: the v. vi. and vij. stormie: the x. and xi. much like.

Last quarter the xii. day, neare vii. a clock in the euening no great store of frost especially the xiii. xiiii. xvii. and

and xix dayes.

New Moone the xx. day, at one a clock and x. min. in the morning, easterly, blasts with some snow, or like fall about the xxi. xxiiii. and xxv. dayes.

First quarter the xxvi. day, halfe houre past iii. a clock in the afternoone, and the xxvii. xxviii. xxix. and xxx. kindely for the time.

December.

Saturne is our euening Starre.
Iupiter and Mars be neare together.
Venus is our day Starre.
Mercury is vnder the Sun beames.

Full Moone the iiii. day, at ix. a clock and xix. min. in the morning: and the v. vi. vii. and viii. hard daies: the ix. x. and xi. some winter fall.

Last quarter the xii. day at one a clock and xii. min. after noone: the xiii. and xiiii. disposed to frost and snow: the xv. xvi. xvii. and xviii. more open.

New Moone the xix. day, xxv. min. before xii. a clock at noone: and the xix. and xx. like to freese: the xxi. xxii. xxiii. xxiiii. and xxv. snow or sleete, if the South-west winde blow not too hard.

First quarter the xxvi. day neare iiii. a clock in the morning: the xxvii. xxviii. and xxix. rugged. xxx. and xxxi. wet and windie.

The note and nature of euery day good and bad this yeare.

God hath made all things for himselfe, and the wicked for the euill day. *Prou.* 16.4.

Ianuarie.

Good dayes.	Euill dayes.
1.2. Good counsell,	3. A pad in the straw,
4. Willing to his power.	5.6. Crosse & ouerthwart.

To the friendly Reader.

HE that at euery ſhoote can hit,
a marke, ſet out of ſight:
A right good Archer may be thought,
by due-deſerued right.
But ſuch as can ſo ſurely ſhoote,
are ſcarcely to be found:
Things very rare: like to blacke ſwannes,
are likely to abound.
And ſo to ſhoote, I muſt confeſſe,
I want the perfect skill:
To ſhoote as neere, as wit will ſerue,
there is no want of will.
And if I ſhoote, about this marke,
and hit but now and then:
Perhapps I may yet ſhoote as neere,
as doe ſome other men:
Maine Archers that haue euer well
ſhot at this hidden marke,
Traduce I not: nor any elſe,
though ſcarce good Engliſh clarke.
Take (gentle Reader) in good gree,
this ſimple gyft of mine:

Which francklie, and of meere good will
I offer to be thine.
Respect good will, more then the gyft,
the Poet plainly saies,
The giuers minde aboue the gyft,
deserues the deer prayse.
Beare with me now, I first assay
my bowe, and try my strength,
An Archer meane, by practice may
become right good at length.

Venia primum experienti.

Ouid Epist. 16. Heroid.

Munera sunt author, quæ premosa facit.

A

A Discription of the foure Quarters of this yeere 1606: And first of the Winter quarter.

(.)

Sunne in ♑ ♐ ♑.

The Winter quarter, wherewith wee vsually begin the yeere (according to our English Computation) made enterance in the yeere afore-going, the eleuenth day of December, at which time the Sunne, by his vncessant motion, had gotten himselfe into the farthest limits of his Southerne declination. Which happened at his first enterraunce, into the first triple of the colde earthly signe Capricorne, the onely and naturall house of malefecient Saturne.

The Sunne at that instant, bearing (with vs) fallen furthest from our Zenith, mounted vpon our Meridian, making with vs then the shortest day, and longest night. Which dureth vntill hee hath finished his recticircle course through the three last signes of the Zodiacke,

concluding with the last minute of Pisces.

This part of the yere according to the learned Writers, (drawne from the aspects of the starres, and especially the seauen Planets) is inclinably cold and moyst, answering to the complexion of old men, and agreeable to the element of Water. Likely to be a colde and sharpe Winter, with much frostes and snow, and blustering cold windes. Subiect to many greefes, as paine in the eyes, quartane feauers, oppilations of the liuer, and such like diseases: but in generall, such as proceede of coldnesse and moysture.

Of the Spring.

Sunne in ♈ ☌ ☊.

¶ The Spring beginneth this yeere on the xi day of March, at 30 minutes after 7 of the clocke in the morning the same day, the Sunne entering into the Equinoctiall signe Aries, a signe of the firie triplicitie, the naturall house of Mars, and the exaltation of Sol, at which time beginneth a newe solar yeere, together with our quarter Astronomicall. For now hauing ended his last Annuall reuolution, and passed the foure triplicities, returnes againe as (I haue said) into the Equinoctiall

poynt

poynt Aries, making [illegible] as, and through out the world, equall day and night, all the yeare long.

This Spring continueth vntill the 21 of June next following, and is of qualitie hote and moyst, resembling the ayre Element. It is (as Hippocrates saith) the best time to take Phisicke, and to purge the body of diseases.

Touching the temperature of the weather, it is likely to be a warme Spring, [illegible] moysture, and some what dayrie. The diseases likely to be, are phrenesies, megrims, meazils, pluralies, sharpe reumes, coughes, tethers, &c.

Of Summer.

Sunne in ♋ N. ♌.

¶ Summer the third part of this Astronomicall yeere, doth beginne the 21 day of June, 30 minutes after 7 of the clocke in the morning, at the entering of the Sunne into the first poynt of the signe of Cancer, where he maketh the Summer Solstice, and hath his greatest declination to the North from the Equinoctiall line: and then is our longest day & shortest night, and is Summer continueth vntill the 23 day of September following, that the sun doth

doth enter into the Equinoctiall signe Libra.

This season, according to his proper nature, is hote and dry, compared to the Element of fire, and complexion of Choller, and differeth greatly, both from the Spring and Winter, and also from the Harvest season, and is a more dangerous time then the two former. For the sicknesses hereof, are more desperate: and if they be not deadly, yet their continuance is the longest.

In summe in this quarter the weather will be very hote, yet some and then much clowdie and ouer-cast, with falling of some warme shewers.

The sicknesses are hote burning Feauers of all sorts, and the Pestilent feauer in many places, which God forbid.

Of Harvest or Autum.

The Harvest quarter, called also Autumne, being the fourth and last quarter of this yeare, doth begin the 13 day of September, about three of the clock in the afternoone, and endeth the 12 day of December next following, for then the Sunne doth enter into the signe Libra, making the second Equinoctiall,

tiall, the day and night inst of equall length, accounting the day from fyre in the morning, vntill fyre in the euening, that is from the rising of the Sunne, vnto the setting of the same.

This quarter is naturallie colde and dry, agreeable to the melancholie complexion, and earthie Element.

As touching the weather, there is like to be much windy stormie weather, with some store of wet. And towards the latter end some snow.

The sicknesses of this season, will be much paine in the eyes, stopping of the spleene, shortnesse of breath, with other strange diseases, whereof many young people are like to die.

What

What members of the bodie are gouerned by the twelue *Signes, and of the diseases to them appropriate: Also the change, full, and quarters of the Moone, for euery Month in the yeere.*

VVith other necessary things conuenient to be knowne.

Ianuarie. 1606

AQuarius, the signe which the Sunne entereth into, the tenth day of this present month, is of the Aire, masculine, ayrie, and sanguine, and gouerneth the legges: And the sicknesses appropriate, are, Feuer quartanes, blacke Iaundies, swelling of the legges, and barres.

First quarter the fift day at 3 of the clocke, fiue minutes in the morning, dry and frostie.

Full moone the 10 day, at 3 of the clock 54 minutes in the morning, very colde and hard frost.

Last quarter the 21 day, at two of the clock forty fiue minutes after noone, some snowe and raine.

New

Newe moone the 28 day, at 7 of the clocke foure minutes in the morning, dry and frostie.

In this Month vse little Phisicke, except great neede constraine thee, then vse it with learned counsell: weare warme clothes, and eate warme meates: also to drinke white Wine fasting is verie good.

Set thy Apples, Peares, Wardens, Quinces, Plumbes, Cherries, Filberds, and all other quicksets, the wind not North.

February. 1606

PIsces, into which the Sunne entereth the ninth day of this Month, is of the North, feminine, watery, and flegmatique, and ruleth the feete, & sicknesses the Gout, Scabs, Ieprosie and Palsie.

First quarter the fourth day, at nine of the clocke three minutes at night, dry & colde blustering weather.

Full moone the twelfth day, at seaven of the clocke 41 minutes after noone, dry and frostie.

Last quarter the 19 day, at tenne of the clocke, fiue minutes after noone, colde & hard frostie weather.

New

New Moone the twentie fyre day at seuen of the clocke, 36 minutes after noone, some miseling weather.

In this moneth, refraine frō all those things which do opilate, stoppe, or thicken the blood, and forbeare the taking of any phisick as yet, except great necessitie drge it, and learned counsaile do aduise it. Also beware of taking wet or colde, for Agues are nawe easily gotten.

This moone increasing, maketh a good time to cut quickſets, to plant or set Roſes, and all other sorts of trees: but in the decreaſe all kind of pulſe, Dates, Onions. &c.

March. 1606.

ARies, into which the Sunne entereth the eleuenth day of this present Month, is of the East, masculine, fierie and cholerick, and gouerneth the head, face, eyes, and eares. &c. And of sicknesses the Appoplerie, Mania: wounds and spots in the face, aboꝛtions, and other impiteous diseases, Ring wormes, and Poꝛphewes. &c.

First quarter the 6 day at 3 of the clocke, 50 minutes at night, dry and windie.

Full moone the 14 day at nine of the clock, twentie

twentie three minutes in the morning, cloudie and great windes.

Last quarter the 21 day at 4 of the clocke, 17. minutes in the morning, dry and faire weather.

Newe moone the 27 viii. day at nine of the clocke, twentie minutes in the morning, dry and windie.

In this month, the humours of mans bodie beginne to moone and increase, and nowe grosse feeding breedeth grosse blood, & grosse humours, wherfore (in milde or warme weather) it is very good to purge, and clense the blood, by potions, bathings, and blood-letting, or such other wayes, as the phitition shall appoynt, and as the course of the disease shall or may require.

Sowe thy Peale, Beanes, and Oates in the beginning of this month.

Also graft and plant fruite trees, and specially in the end of March, couer the rootes of your fruite trees, that were bared before in January, with good earth.

At the full of the Moone, set Pompions, and Citrons, Rosemarie, Rue, Sage, Hope, and such like.

Aprill

Aprill. 1606.

♉

TAurus, into which the sunne entereth the eleuenth day of this month, is of ♀ South, feminine, earthie, and melancholique, and gouerneth the necke, throte, and boyce, and of sicknesses, Squinances, Scrophules, Catharres, and hoarsenes.

First quarter the 5 day at 9 of the clocke, 44 minutes before noone, some little raine.

Full moone the twelfth day at seauen of the clocke, fortie foure minutes at night, cloudie, and milling wether.

Last quarter the 19 day at ten of the clock, 50 minutes before noone, dry and faire.

New moone the 26 day at 11 of the clocke 56 minutes at night, cloudie, but yet dry.

In this month the poores of mens bodies are opened, & diseased bodies apt to receaue Phisicke, and they that now refuse the same, I commit them to the benefit of nature, for of all times in the yeere, this is the best to preuent sicknesses likelie to ensue, or for speedie remedie in extremities.

For now Nature herselfe renueth strength through all the bodie, so that where sickenesse hapneth, shee soone vnburdeneth herselfe ther-

of

of by meanes of Phisicke. Wherefore, what it cannot doe nowe, hereafter it will hardlie be doone, therefore take time while time is.

Set Artichothes, Coucumbers, Pellons, Citrons: also you may now graft, for it is very good. Sowe flaxe, and in the decrease of the moone, sowe Barlie, Oates, and Pulse. &c.

May. 1606.

II

On the twelfth day of this month, the sun entereth into Gemini, which is of the West masculine, ayrie and sanguine, and governeth the shoulders, armes and handes. And of sicknesses, Flegmous, Farnunculus, and other greenances proceeding of blood in the same places.

First quarter the fift day at 3 of the clocke, 17 minutes in the morning, very hote and dry weather.

Full moone the twelfth day, at foure of the clocke, 13 minutes in the morning, some mild ayre and cloudie.

Last quarter the 18 day, at six of the clocke, and 43 minutes at night, some raine.

Newe moone the 26 day, at 3 of the clocke eight minutes in the afternoone, cloudie and

overcast,

ouer-cast, like to raine.

In this moneth of May rise early, for May loueth no sluggards: & let such as be in health, walke in the fields.

Howe eate and drinke a little in the morning, and for such as be sicke, it is good to take Phisicke, for after this moneth bid Phisicke farewell, vntill September, except necessitie inforce thee.

Set and sow all tender herbes; as sweete Marierom, Sommer sauerie, Basill.

Sow also hempe and flaxe. Make Aqua vitæ, and other vitrified waters. Howe haue some care of watching your Bees.

Iune. 1606.

ON the eleuenth day of this Moneth, the Sunne entreth into Cancer, which is of the Earth, feminine, watrie, and flegmatique, and ruleth the breast, ribbes, pappes of women, lunges, liuer and Spleene.

Vse of lettuces, Alopecia, waterie eyes, coughes, Rewmes, Scabbes, and Leprosie.

Full quarter the third day at three of the clocke, foure minutes at night, dry and windie weather.

Full moone the tenth day at seuen of the clock,

clocke, thirtie and one minutes before noone, very hote, and sunne shining.

Last quarter the xviii. day at five of the clock five minutes in the morning, very hote, and dry weather.

Newe moone the xxv. day at vi of the clock, 24 minutes in the morning, some raine and milling weather.

In this Month, if thou must needes take Phisicke, take it early in the morning, that it may have wrought before the heate of the day doe come.

Use also a light and thinne diet, for the stomacke is not nowe so well able to digest as in Winter, or some other of the former months.

It is now good and wholsome for some to drinke clarified Whay, sod with cold herbes.

Now make oyle of Roses, syrope of Roses, and still Rose water.

The time now is good to sette Rosemarie, and Gillioflowers, with other salet herbes.

A little before, or after the full, sowe Radishes, and now wash thy sheepe for to sheare.

Julie. 1606.

☌

THis month the Sunne entereth into the Signe Leo, and is of the East, masculine,

C. fierie,

sterie, and chollericke, and ruleth the heart, stomacke, backe, lives, and the midriffe, with Virgo. And of sicknesses, Cardiaca passio, or trouble of the hart, and often sounding.

First quarter the third day at three of the clock, and five minutes in the morning, temperate weather, yet ouer-cast with some cloudes.

Full moone the ninth day at seauen of the clocke sixty three minutes at night, very soulsrie hote.

Last quarter the sirteene day at sixe of the clocke, twentie five minutes at night, verie hote and dry.

In this month, vse cold herbes, and colde meates, abstaine from Phisick, and extreame exercise and labour.

How the Riuers are more wholsome then the bathes, &c.

Veneris et gaudia linque.

August. 1606.

OF the fourteene day of this Month, the Sunne entereth into the signe Virgo, being of the South, feminine, earthy, and melancholique, and gouerneth the belly, guttes, and midriffe with Leo.

The

The ſickneſſes are Illiaca, and Collica paſſio, oppilations of the ſpleene, & black Jaundies.

Firſt quarter the firſt day, at twelue of the clocke, fiftie one minutes at night, inclining to dry weather.

Full moone the eight day at 2 of the clocke, thirtie foure minutes in the morning, verie hote and cleere weather.

Laſt quarter the fifteene day at nine of the clocke, fiftie one minutes before noone, inclining to raine.

New moone the twentie-three day at 11 of the clocke, fiftie-nine minutes paſt noone, cloudie, yet dry weather.

Firſt quarter the thirtie day at five of the clock, fourteene minutes at night, dry and faire weather.

In this month moderate diet is good for ſicke, for none it is very dangerous to ſurfet, and beware of taking colde after heates, for nothing ingendereth ſooner Pluriſies. And beware of after-noones ſleepe, eſpeciallie ſoone after your dinner, for it cauſeth oppilations, and procureth head-ach, Catharres, and makes one very vnluſtie. Cut your corne, gather your ſeedes, & now with thankes to God receaue all the fruite of your winter labors.

September. 1606.

☌ The thirteenth day of this month, the Sunne entreth into Libra, which is of the aire, maſculine, ayrie and ſanguine, and ruleth the loynes, nanell, reines, buttockes, and the bladder with Scorpius.

The ſickneſſes are dimneſſe of ſight, ſtopping of the wine, the ſtone in the reynes, and the collicke.

Full moone the firſt day, at fiue minutes paſt twelue of the clocke at noone, cloudy and dry weather.

Laſt quarter the fourteene day at three of the clock, fortie fiue minutes in the morning, faire and dry weather.

Newe moone the twentie two day at two of the clocke, one minute in the morning, ſome ſmall raine, and miſtings.

Firſt quarter the twentie ſeauen day, after eleuen of the clock, fiue fours minutes in the morning, dry and windie.

In this month, ſuch as haue need of Phiſick may ſafely take it, and may alſo bath and bleede.

The time is now good to make conſerues of Barberies and Quinces.

Oct

Set vp your seeres for your winter herbes. Sowe for Artichokes, Roses, Apples, Damaske berries, Wardons, Quinces, Peares, Dates, Almonds, Filberds, and Chestnuts: gather Apples three dayes before the full.

October 1606.

snow.

snow.

First quarter the twentie-fire day, at three of the clock, thirtie minutes in the after noone, very hard weather and raw, but dry.

With this month finish the Philicke yee meane to take, and so rest till March, except necessitie doe compell.

Noine vse good hote meates, and drinke good wholsome wine to nourish the blood and prouide thee warme clothing, and goe dry shod, or else make some sure account of the reigne and rose.

Set Crabstocks for grafting and remoone trees. &c.

December. 1606.

ON the thirteenth day of this month, the Sun entereth into the signe Capricorne. Which is of the South, feminine, earthy, and melancholique, ruling the knees. And of sickenesses, ache in the knees, weakenesse, losse of speech and sight, itch, scabbes, and lowsenesse of the skinne.

Full moone the fourth day at nine of the clocke, three minutes before noone, dry and frostie.

Last quarter the twelfth day at one of the clocke,

clocke, sixteene minutes past noone, cloudie and darke ayre, and very colde, with some snow.

New moone the nineteene day, at eleuen of the clock, thirtie three minutes before none, very cold and frostie.

First quarter the 26 day at 3 of the clocke, and 33 minutes in the morning, very colde and hard frost, with some store of snow.

In this month be quiet, and vse good diet, let them be thy Potations. Let thy kitchin be thine Apothecarie, let warme clothing be thy nurse, merry company thy keepers, and good hospitalitie thine exercise.

Giue part of that thou possessest to the poore, for his sake that became poore to make thee rich: and be thankfull to him for all his benefites, and alwaies remember them.

The sinne, thine end, the death of Christ,
The eternall payne of hell,
The day of doome, the ioyes of heaven,
These like remember well.

Phisicall

Phisicall obseruations.

NOte that fro the change of the moone to the first quarter, from thence to the full to the second quarter, the humours doe moue: shall the inward parts to the outward vnderstand: and contrariwise from the first quarter vnto the full, from the second quarter to the change, the grose carried by a contrarie motion, from the outward parts vnto the inward parts of the bodie. Therefore in the first and third sections of the moone, generall euacuations appointed by medicines are auailable: with best successe: but when the moone is in the middle betweene both, it is not then good to purge, for the drift doth, vnlesse that some great necessitie doe require the same.

No part of mans bodie ought to be touched with any instrument Chirurgicall, or actuall or potentiall cauterie, when the moone or

Lord

Lorde of the Ascendent is in the same signe that ruleth that part of mans body.

Also Gemini, Leo, the last halfe of Libra, and the first twelue degrees of Scorpius, with Taurus, Virgo, and Capricorne, are not good for letting blood.

Moreouer, Clisters and gentle Purgations may be ministred, at any time without danger.

Besides this, for letting of blood, I say, if it be for the plague or pestilence, the Phrensie, the Plurisie, the Squinancie, for the continuall burning Agues (as other times of the yeare doth abound) for a continuall or great head-ache, continuing of choller, or hote and sumptuous bloud, or for any other extreme paine, (wee may not (in all these cases) tarry for a chosen day by the Astrologer, because death might preuent the patient in the meane time, but immediately he must be let blood without delay, vnlesse he be extreme weake, or like to sounde. Except also the Moone be in the same signe that ruleth that part of mans body.

Yet this last exception notwithstanding, I haue seene in great danger, ỳ patient let blood in the arme, the signe being in Gemini, and no hurt hath followed, but health, for as the prouerbe saith: Necessitas non habet legem.

And

And Hippocrates saith: Extremis morbis, extremæ exquisita remedia optima sunt. In deerie dangerous diseases, a man may venter, but yet not too much, nor rashlie, vt nequid nimis.

Prepare any humour, when the Moone is in any signe figue, as namely in Gemini, the first halfe of Libra, or in Aquarie.

Purgations are best taken, the moone being in a watrie signe.

With { Electuaries / Potions / Pilles } in { Cancer. / Scorpius. / Pisces. }

Baths for health, the moone beeing in Aries, Leo, or Sagittarius, and for cleanlines, the moone beeing in Libra or Pisces.

An oyntment or plaister, is best applyed when the moone is in that signe which governeth the same member to which it is applyable.

Purge by vomit.

The moone being in { Aries. / Taurus. / Capricornus. }

Purge

Purge the head by neesing.

The moone beeing in { Cancer. / Leo. / Virgo. } Good to stoppe Fluxes, rewmes and laxes.

The moone beeing in { Taurus. / Virgo. / Capricornus. } Good to take Gargarismes.

The moone beeing in { Aries. / Cancer. / Capricornus. } Good to purge in a Hote-house.

The moone beeing in Libra, or Pisces. Good to cut haire of the head or beard.

The moone beeing in { Libra. / Sagittarius, / Aquarius, / Pisces. }

Most conuenient times for certaine things concerning the xij. Signes.

GOod to set, sowe, or plant, when the Moone is in Taurus, Virgo, Capricornus, or Pisces.

Good also, to sowe all kinde of corne when the moone is in Cancer, the season of the yeere for each kind considered.

Good to graffe, when the moone is in Taurus and Aquarius, at the increase of the Moone.

Good to sheare sheepe at the increase of the Moone.

Good to fell tymber for building, from the full of the Moone, vnto the change.

But to cut downe, & to fell wood to burne, and that the stocke may the better and sooner growe againe, let the moone be at the first quarter.

Good to geld beastes and cattell, the moone being in Aries, Sagitarie, or Capricornus.

Kill fat swine for Bacon, the better to keepe they⁊ fatte in boyling, about the full of the Moone.

A Table wherein is shewed the Nones, Calends, and Ides of the dayes in euerie Month.

¶ Howe to finde out the change of the Moone in any Kalender for euer.

FIrst seeke out in any month in the Kalender the golden number of the yeere, and when you haue found it, account from that day

day vpwards (inclusiuely) fiue dayes, and vpon that fift day the Moone changeth, and so of other yéeres, as the golden number altereth.

As for example, I séeke out the golden number in the month of June, this yeere, which is 11, which standeth right against the 29 day of that month, vpon which 29 day I begin to reckon, saying, one on the 28, two on the 27, thrée on the 26, foure on the 25, fiue vppon which day the Moone changeth.

Some expresse these fiue dayes by some short sentence, contayning words of fiue syllables, as De-um-ti-me-to.

FINIS.

Woodhouse. 1606.

An Almanacke and Prognostication, for the yeare of our redemption, 1606

Necessary for all men, chiefly for Gentlemen, Lawyers, Merchants, Mariners, Husbandmen, Trauellers, Artificers, and all other.

Faithfully supputated for the Meridian & inclination of Wolfer Hamptom in Staffordshire, and may most aptly serue for all England, by William Woodhouse, Clark of his Maiesties great Custom.

In the port of London, and studeat in *Astronomy*:

Imprinted at London, for the company of Stationers.

A declaration of this present Almanack, for 1606. being the second from the Bissextile

the 21 from the mending of the Kalender

And from the beginning of the world, 5568.

The golden number is xi.
The circle of the sunne is xix.
The Epact is i.
The Dominicall letter is g
Indiction of Rome is iiii.
Interuallum or space between Christmas and Shrove sonday is ix. weekes and iiii dates.
Shrove sonday is the second day of March.
Ashwednesday the fift day of March.
Quadragessima or the first sonday in Lent is the ix. day of March.
Easter day the xx. day of Aprill.
Ascension day the xxix. of May.
Whitsonday the 8. of June.
Trinitie sonday the 15. day of June.
Certaine rules of Astrologie very necessary.
Item for rising and setting of the sunne.
Item a perfect rule to knowe the planetary houres throughout the yeare.
Item dangerous dates to fall sicke, or to take phisicke are marked in the Calender with this marke ( )

A rule to knowe when the Termes begin and end, with their returnes.

Hillarie Terme beginneth the 23. day of Januarie, endeth the 12. day of February, and hath these foure returnes: that is to say,

Octabis Hillarij	}	{ Crastino Purificat.
Quind. Hillarij	}	{ Octabis Purificat.

Easter Terme beginneth the 17. day after Easter, and endeth the monday next after Ascension day, and hath fiue returnes: that is to say

Qnind. Paschæ	}	{ Quinque Paschæ
Tres Paschæ	} Mense Paschæ	{ Crastin. Ascension.

Trinitie Terme beginneth the friday next after Trinitie sonday, and endeth the wednesday fortnight after, and hath foure returnes: that is to say,

Crastin. Trinitatis	}	{ Quind. Trinitatis
Octab. Trinitatis	}	{ Tres Triuitatis

Michaelmas Terme beginneth the ninth day of October, and endeth the 28. day of November, and hath eight returnes: that is to say

Octab. Michael.	}	{ Crastin. Animarum.
Quind. Michael.	}	{ Crastin. Martini.
Tres Michael.	}	{ Octab. Martini.
Mense Michael.	}	{ Quind. Martini.

Note also that the Exchequer openeth eight daies before any Terme begin, except Trinitie Terme, in which it openeth but foure daies before.

THE ANOTOMIE OF MANS

body, as the parts thereof are gouerned by the 12 celestiall signes.

Aries the head and face.

Taurus, Neck & throte.

Gemini Armes & shoulders.

Cancer Breast stomach & lungs

Leo. Hart & back.

Virgo. Guttes & belly.

Libra. Reynes & loynes.

Scorpio Secrets & bladder.

Sagitarius. Thighs

Capricornus. The knees.

Aquarius. The legges.

Pisces. The feet.

Warme meats this moneth conuenient be,
Flie slouth, sweete drinkes, be rulde by me:
VVhite wines also as wholesome is,
Bleede not, nor bathe, forget not this.

August hath xxxi. daies.

In August sleepe as little as you may,
To take no medicines as I doe say,
Fast and forbeare meates, as much as you can,
Purge not, nor bleede not, but be content than.

Woodhouse. 1606.

A Prognostication for the yeere of our Lord God. 1606.

Shewing the estate thereof, by the principles of Astrologie, and the grounds of Phisicke, instructing the gentle Reader in most necessarie things for his vocation, and directing the desirous and ingenious Student in higher matters.

Serving generally for all England: Gathered and published by William Woodhouse, Student in Astronomie.

Imprinted at London for the Companie of Stacioners.

Sundry thinges necessarie to be knowne, leading to the Iudgement of the yeere following, being the seconde from the leape yeere.

The signe of the great Orbe ♑
The gouernesse of the same Orbe ☿
The degree of profection of the same Orbe is the xxi degree of ♏ ☿
The Diuision of this time by Ptholomie is
The great coniunction of Saturne and Iupiter, in the 10. deg. of Sagit. being the first of the fiery Trigon which sheweth great alteration.
The Apogeon of Mercu. entred Sagitta. the ij. of July 1585. the 14. degree of Scorpio ascending.
The Sunnes returne to the deg. of the great coniunction of Saturne and Iupiter the 21. day of Nouember.
The Eclipse of the Moone in the 4. deg. of Aries the xvij. of September 1605.
The great Eclipse of the Sunne in the 19. deg. of Libra neere the Dragons head.
The coniunction of the Sunne and Moone, going before the Sunnes ingresse into Aries.
The figure of the Reuolution at the returne of the Sunne into the first min. of Aries, and is the true beginning of the Astronomicall yeere.
In this yeere of our Lord 1606. shall bee seene no Eclipse of the Sunne or Moone about our Horizon.

A rehearsall of the Eclipse of the Moone in September. 1605.

The 18. Eclipse of the Moone which was the 19. day of September, at 10. of the clocke and 12. min. in the morning, not farre from the Dragons taile, in the 18. deg. of Aries, as the figure following sheweth.

And being seated in the 8. house, which is of Death, Sorrow, Sadnesse, Mourning, and the heritage and goods of the dead, not beheld of any benevolent Planet, either Iupiter or Venus.

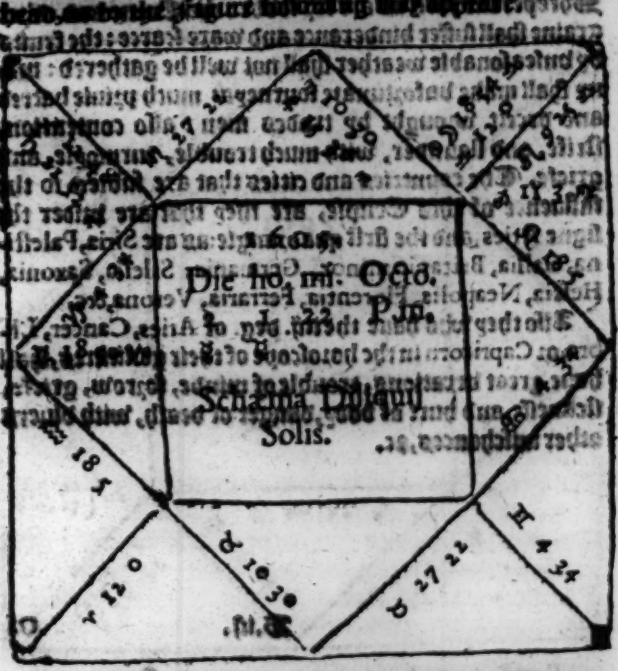
The

The Planets that governe in this Eclipſe, are Mars and Mercury, the Moone being diſtant the fourth parts of the ſuperficies of her body. The influences of this Eclipſe, doe begin to take their effect the 11. day of July, this yeere of our Lord 1606. and end the 17. day of October following. This Eclipſe foreſheweth great loſſe by death and ſickneſſe of Cattle, eſpecially Sheepe, and ſuch as are fat: the Corne and other graine ſhall ſuffer hinderance and ware ſcarce: the fruits by unſeaſonable weather ſhall not well be gathered: many ſhall make unfortunate iourneys: much ſtrife, hatred and deceit wrought by trades men: alſo contention, ſtrife, and ſlaunder, with much trouble, turmoyle, and griefe. The countries and cities that are ſubiect to the influence of this Eclipſe, are they that are under the ſigne Aries, and the firſt quadrangle: as are Sicia, Paleſtina, Gallia, Britania minor, Germania, Sileſia, Saxonia, Heſſia, Neapolis, Florentia, Ferraria, Verona, &c.

Alſo they who haue their Aſc. deg. of Aries, Cancer, Libra, or Capricorn in the horoſcope of their natiuities, ſhall haue great vexations, trouble of minde, ſorrow, griefe, ſickneſſe, and hurt of body, danger of death, with diuers other miſchances, &c.

Of the great and fearefull Eclipse of the Sunne the 1[2]. of October 1605.

The Eclipse of the Sunne the 1[2]. day of October at 9 houres 18 m. after noone, found to be in the 22 degree of Libra not far from the Dragons head, and the figure following may appeare:



And falling in the 12. house, which is of Religion, Faith, Pietie, Perigrination, long Journies, Newes, writings, &c. very partly beheld of Satur. by a fertile aspect in signes of long ascentions, which indeed is a very

bery square, or bad aspect of barred out of the xij. house which is the house of sorrow, bane euents, imprisonment, secret enemies, witches, barlots, and great beasts.

Also Mars commaunding the very degree Eclipsed remaine in the viij. house, which is of Death, the heritage of the dead, goods vnlooked for, also of Feare, Enchantments, Impoysoning, and such like. The Planets that concurre in this Eclipse are Saturne and Venus, the Sun being darkened xi. poinct and a quarter, which is very seldome seene, for it is almost the whole superficies of his body. The whole continuance from the beginning to the ende is 5. houres and a halfe: the influences and effects thereof doe begin the xiiij. day of May, this yeare 1606. and so increase by little and little till the xiiij. day of May 1607. then shall it begin to rage and shew his greatest forces, (being the midle triem) wherein shall be seene and felt his most bitter effects, and continueth till the xij. of Ianuary 1608. and then decrease by little and little, till the xij. of November following, when as it shall bee wholy ended. This Eclipse sheweth great dearth and scarcity of corne, and other fruits of the earth necessary for foode, also the death of Cattle, and great Weasles that serue for dse, it sheweth likewise much Warre, Diuision, Strife, Bloudshed, Wasting, and Spoyling, great falling out about the goods of the dead, secret hatred, priuate and malicious Enterprises, Betrayings, Witchcraft, Inchauntments, Impoysonings, craft and Deceit vsed in all affayres and trades, disagreement in Religion, maintayning of Sects, and Opinions, and great disquiet thereabout, with sundry other troubles threatned to those countries and cities as are subiect to the signes of the first Quadrangle, as are Austria, Lituonia, Asiatia, Delphinatum, Albania, Grecia, Saxonia, Hesia, Orchades insulæ, Gallia, Britannia minor, Burgundia, Germania, Polonia, Hollandia, Selandia, &c.

Vienna

Vienna, Austria, Francofordia, Machlinia, Gandauum, Oxonia, Cracouia, Cæsaraugusta, Florentia, Eboracum, S. Andrea, Venetia, Genua, &c. & most of the vi. aungl. Clime. Likewise all they that haue the ascendent or the Moone in their genitures in the xx deg. of Libra, Aries, Capricorne or Cancer shall haue great disquiet of mind, veration and griefe, sickneſſe of body, hurts, misdoumtes with perill of life, and losse of liuinges inflicted vpon them.

Also they that haue the Sun or tenth house in any of these degrees shall suffer losse of honour, Offices, Dignitie, Credit, Estimation or be hindred in their actions, businesses and affaires.

And they that haue Pars Fortunæ or their second house in any of these forenamed degrees shall indure losse in their substance, the wasting of their goodes, the consuming of their wealth, and extreame ouerthrowe of their enterprises. All which and all other calamities God turne from the faithfull. Amen.

A Discription of this yeeres Reuolution, as followeth.

The Reuolution of this yeare taketh his beginning when as the Sun enters the first minute of Aries, which shall be this yeere the xi. of March at vii. of the clocke, and x. min. in the morning, in the houre of the Sun, the x. deg. of Taurus ascending: The conioinction of the Sun and Moone preceeding in the xviii. deg. of Pisces in the xii. house of this Reuolution, which is of secret enimies, dire euents, imprisonment, bondslaues, standing, preuention, surprising, &c. Saturne being in the ix. house, which is of religion, a long iourney in Capri. Iupiter in the xi. house, which is of friendship, hope, trust, and true dealing, Mars in the vi. house, which signifieth

open

open enemies, ſtrife, contention, law, theft, mariage, &c. The Sun in the xij. houſe, which is of ſorrow, ſadneſſe, all dire euents, priſon, &c. Venus in the aſcendent in her owne houſe. Taurus, Mercurie and Piſces in the xij. houſe. The Dragons head with the part of fortune in the firſt of Libra in the vi. houſe, which is of ſeruants, ſickneſſe, ſmall beaſtes, &c. The Moone in Leo in the v. houſe. whereby may bee gathered thes the eſtate of this yeere, ſhall bee reaſonable good, generally to the bulgar ſort, but the harueſt is like to be hindred by vnſeaſonable wether, whereby the price of corne ſhall bee increaſed and other neceſſaries for food ſomewhat ſcarce, trauailers, and factors for Marchants ſhall haue but bad ſucceſſe in their trauailes, and they that goe long Journeyes ſhall be hindred and letted, much ſtrife, debate, law and quarrelling about ſleight matters and trifles, much impriſonment and cruelty. From which and all other calamities due for ſinne, God in his mercie turne from vs and preſerue our moſt gracious King and Queene, the Prince and Realme. Amen.

Of the Diſpoſition of the Aire, and varietie of the Windes, with other neceſſarie things through-out the xij. Moneths of this preſent yeere. 1606.

Ianuarie.

THE firſt day Saturne riſeth before the Sunne, in the 2. deg. of Capricorn. Iupiter ſets after the Sunne vnder his beames, in the 8. degree of Aquarie. Mars is ſeene South-eaſt, in the 4. deg. of Scorpio at Sunne riſing. Venus is the Euening Starre, and ſets after the Sunne, in the 3. degree of Piſces. Mercury is vnder the Sunne beames, in the 2. deg. of Aquarie. The Dragons head is in Libra, the 5. deg. The iij. day Venus oc. cum Lira.

The firſt quarter the v. day at xi. of the clocke, and xxx. minutes at night, the Moone in the 21. deg. of Aries: the weather cold and cloudy: the winde Eaſterly. The vi. day Venus M. C. cum Fomahand. Mars cum Arcturo. The x. day Luna in Apog.

The full Moone the xiij. day. at iij. of clocke and xxxv. min. in the morning, ſhee being in the 4. deg. of Leo: the weather faire for the time: the winde Eaſt or South-eaſt. The xvij. Mars oc. cum vin. The xviij. Luna cũ Cap.

The laſt quarter the xxi. day, at ij. of the clock and xxiij. min. afternoone, ſhee being in the 11. deg. of Scorp. the weather diſpoſed to raine: the Winde Northerly.

The

The xviij. Luna perig. The xx. Venus enters Aries.
The new Moone the xxiiij. day at vj. of the clock and xl. min. in the morning, shee being in the 19. deg. of Aquary, variable, inconstant weather: the winde west and South west, the same day Sirius oritur vespere, initium facit phitatiæ vel incisionis temporis, Hip. septima tempestas. The xxix Mercury is retrograde in the 3. deg. of Pisces. The last day the Moone is with Cauda Draconis.

Februarie.

The first day Saturne riseth before the Sunne in the 5. deg. of Capric. Iupiter is vnder the Sun beames in the 19. of Aquary, Mars may be seene due South at Sunne rising in the 20. deg. of Scorpio, Venus continues our Euening Star in the 8. deg. of Aries, Mercurie is vnder the Sunne beames in the 3. deg. of Pisces, the Dragons head in the 3. deg. of Libra. The ij. day Regulus or. vesp.
The first quarter the iij. day, at vj. of the clock and xx. min. at night the Moone being in the 26. deg. of Taurus: the weather cold, disposed to moysture and winde: the wind Northerly. The v. day Mer. enters Aquarie. The vij. Luna in Apog. The viij. Mars oc. cum acu. Scorpii.
The full Moone the xij. day at vij. of the cloche and xxiij. min. at night, shee being in the 4. deg. of Virgo: the weather cold frostie, darke, ouercast, cloudy: the winde South. ess. The xiiij. Luna cum Capite Drac. The xvij. Cauda Leonis or. vesp.
